INTRODUCTION

The Traffic Group, Inc. has provided various traffic engineering and design services for the Town of Bethany Beach, Delaware.

The primary task was to assess the motorized and non-motorized traffic flow in the downtown or core center of the Town, located to the east of Delaware State Route 1. Traffic counts were collected and analyzed, crash data was collected, and recommendations for providing safe and complete streets for all roadway users were developed and presented.

A secondary task was to assess the motorized and non-motorized traffic flow along Delaware State Route 26, Garfield Parkway, particularly in the area of Treetop Lane. Traffic counts were collected and analyzed, crash data was collected, and recommendations were evaluated for improving safe access for all roadway users.

Finally, the section of DE SR 26 from DE SR 1 to the Assawoman Canal was reviewed for adequate accommodations for pedestrians and bicyclists. Alternative routes, and improved access at DE SR 1 were presented.

DOWNTOWN AREA

Study Purpose

The Traffic Group, Inc., has conducted a pedestrian and bicycle safety study for the town core area of Bethany Beach, Delaware. The Town of Bethany Beach is bisected by Delaware State Route 1 (SR 1) which runs in a north-south direction. Delaware State Route 26, Garfield Parkway (SR 26) bisects the Town of Bethany Beach in an east-west direction.

As a resort community, many residents and visitors travel within the town on foot or bicycle, often with beach gear in tow and/or with strollers. The primary purpose of Core Area study is to develop strategies to implement complete street concepts to provide safe streets for all users.

Study Area

For the purpose of the Center Core (Downtown) study, the area from Cedarwood Street on the south to Third street on the north was selected for study as shown in Figure 1, Study Area Map. Garfield Parkway, SR 26, provides the primary east-west roadway into the Core area. Pennsylvania Avenue and Atlantic Avenue provide access to residents and businesses in a north south direction.

Figure 1. Study Area Map

Existing Conditions

Garfield Parkway, SR 26, is a two-way roadway with a median. Parking is provided along the median and along the sidewalks. The intersection of Garfield Parkway, SR 26, and Atlantic Avenue has been upgraded with crosswalks. Both intersections along Garfield Parkway east of SR 1 are Stop Controlled.

Garfield Parkway looking west from Atlantic Avenue

Intersection of Garfield Parkway and Atlantic Avenue

Atlantic Avenue runs in a north-south direction from Sea Colony to the south to Fifth Street to the north. Sea Colony residents and visitors utilize South Atlantic Avenue to access attractions in the Core Center. In recent years, South Atlantic Avenue was upgraded to provide for pedestrian/ bicycle paths along both sides of the roadway.

Atlantic Avenue Between Ashwood Street and Oakwood Street looking North

North Atlantic Avenue provides for two-way traffic with parallel parking permitted at locations that do not block driveways. A 5-foot bike path is provided for most of N. Atlantic Avenue on both sides. Sidewalks are intermittent.

Atlantic Avenue at Second Street

Pennsylvania Avenue runs in a north-south direction from SR 1 near Sea Colony to the south to SR 1 near the Delaware National Guard to the north. Two-way traffic is provided with parallel parking permitted at locations that do not block driveways. A 5-foot bike path is provided for most of Pennsylvania Avenue which is also used by pedestrians due to the lack of sidewalks.

Pennsylvania Avenue and Wellington Parkway

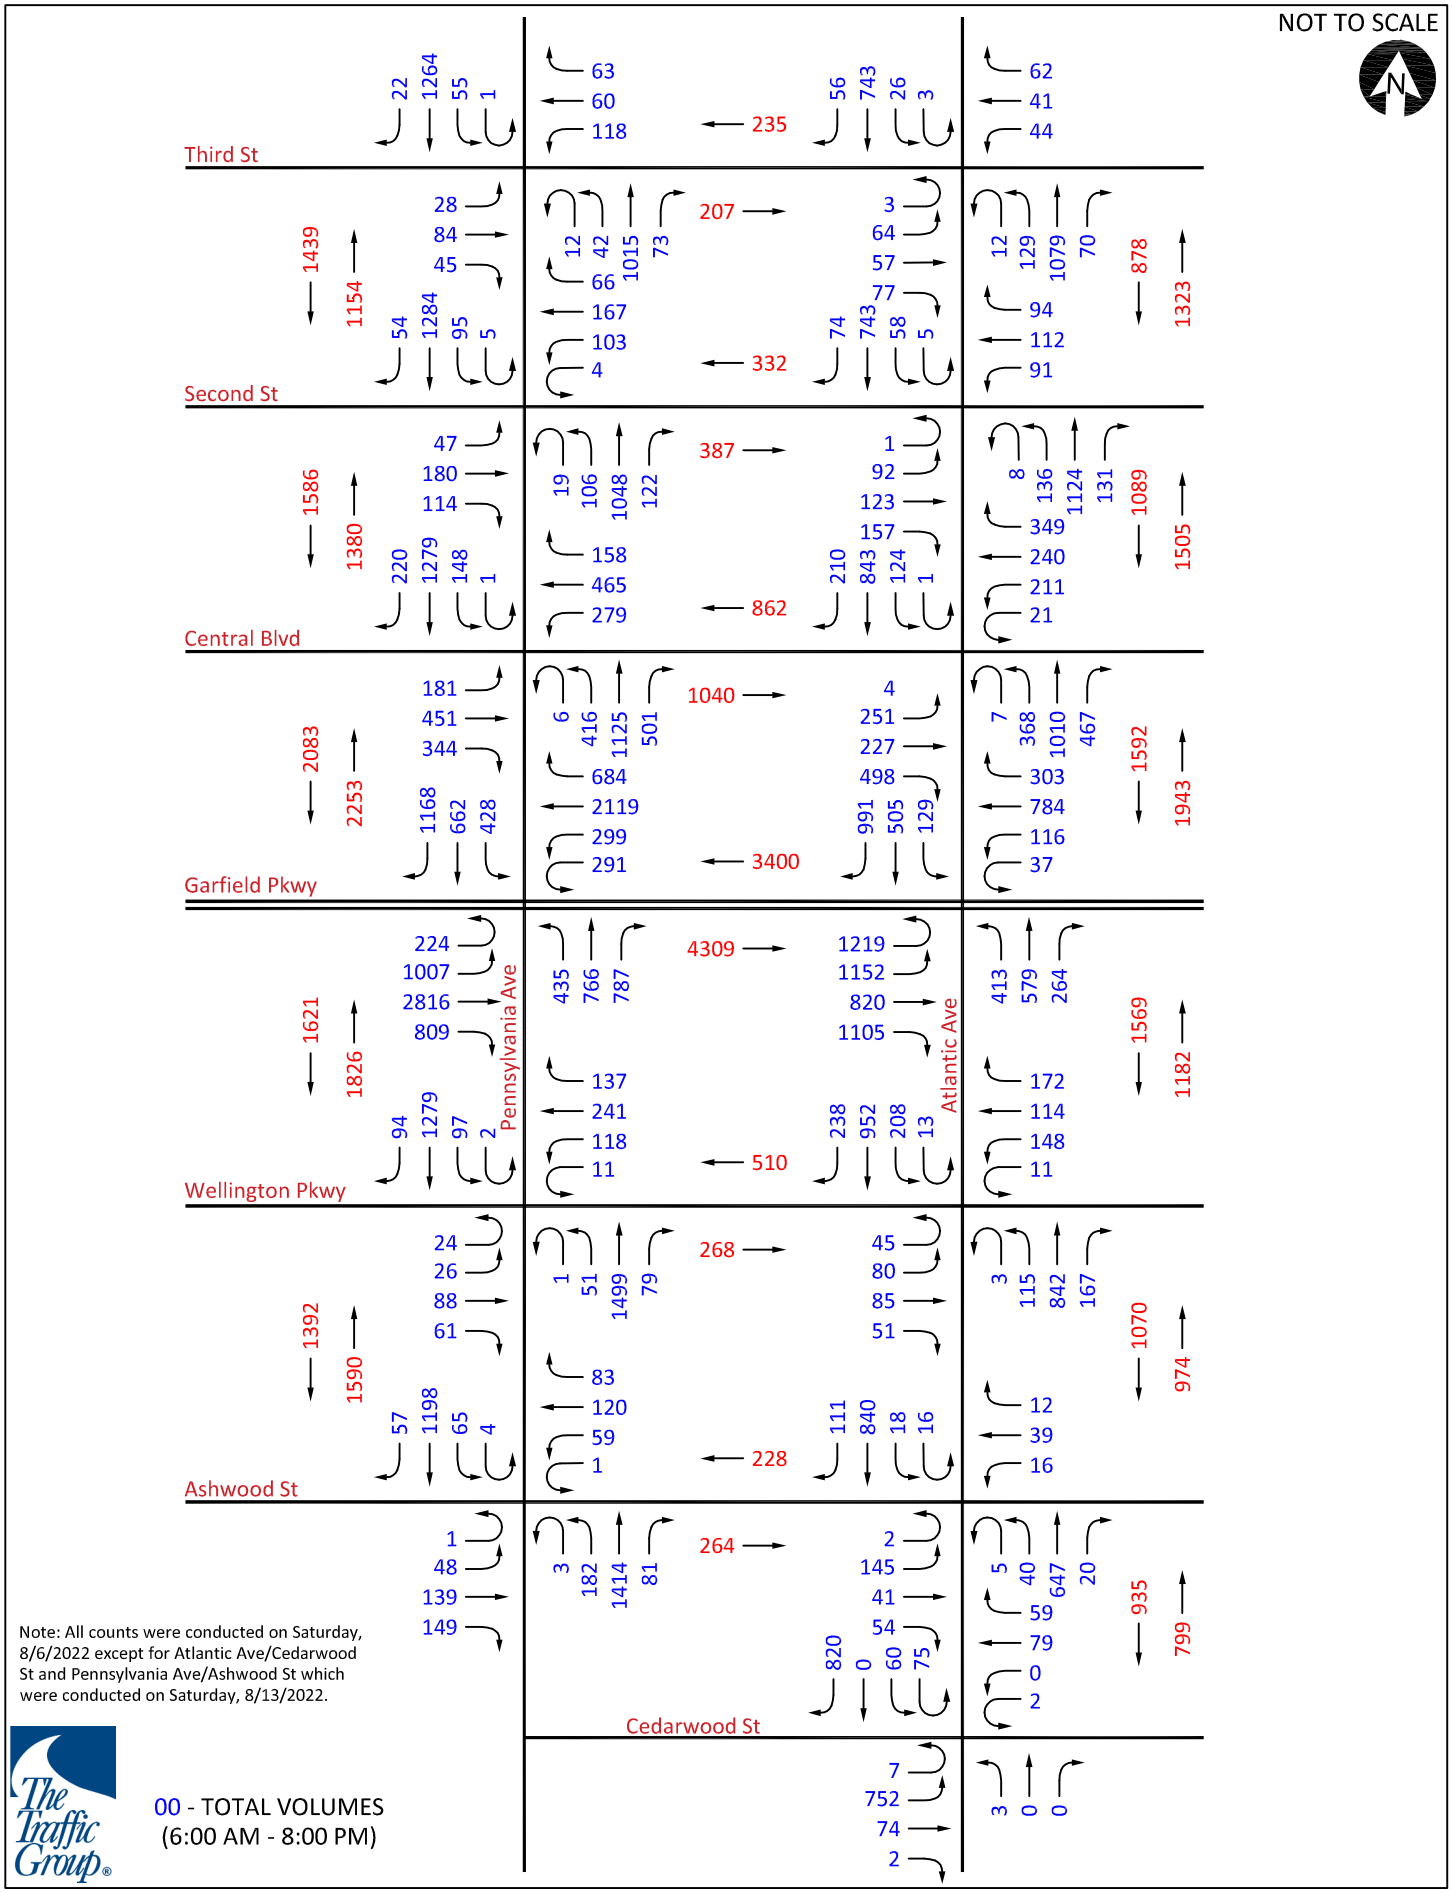
Traffic Volumes

Fourteen-hour traffic volumes were collected at thirteen key intersections in the Core Center on August 6, 2022, and August 23, 2022, from 6 AM to 8 PM. Figure 2 provides the 14-hour turning movement volumes for motorized vehicular traffic. Figure 3 provides the 14-hour turning movement volumes for bicycle traffic using the roadway. Figure 4 provides the 14-hour pedestrian volumes and any bicyclists using the crosswalks.

Vehicular classification counts were collected for a 10½-day period from August 5, 2022, to midday on August 15, 2022, at 9 locations. The weekday and weekend average volumes are provided on Figure 5. Of note is the volume of daily traffic on Garfield Parkway: 12, 588 on an average weekend and 10,531 on an average weekday.

The graphs that follow provide traffic volume fluctuations by hour at each of the 9 locations. Traffic volume data is contained in Appendix A.

Figure 2. Existing Traffic Volumes August 2022



Note: All counts were conducted on Saturday, 8/6/2022 except for Atlantic Ave/Cedarwood St and Pennsylvania Ave/Ashwood St which were conducted on Saturday, 8/13/2022.

Tables 1 and 2 provide the daily traffic volumes on Atlantic Avenue and Pennsylvania Avenue by vehicle classification. As expected, Class 2, Passenger Cars, has the highest volumes with Classes 1 (motorcycle) and 3 (Four tire, single unit trucks) have the next highest volumes. FHWA Vehicle Classification Chart is provided in Figure 6.

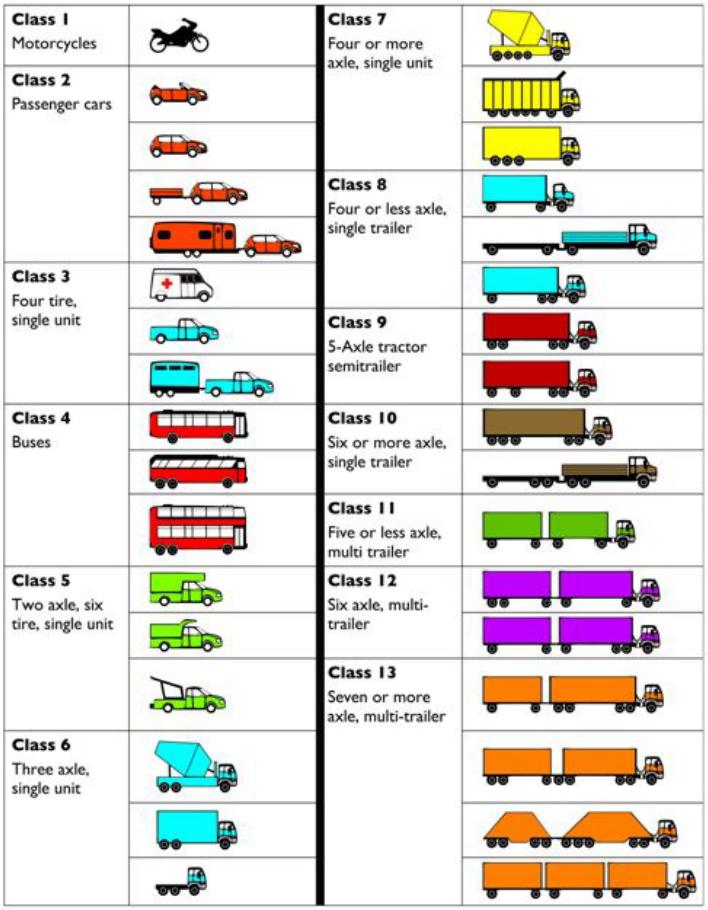
Figure 6. Vehicle Classification Chart



Source: Federal Highway Administration

Analysis of Traffic Flow in the Core Area

The Core Area of the Town of Bethany Beach consists primarily of two north/south roadways: Atlantic Avenue and Pennsylvania Avenue. Numerous east/west roadways connect Delaware Route 1 to Atlantic Avenue and Pennsylvania Avenue. Garfield Parkway is an east/west extension of Delaware Route 26 which divides the Core Area into a north section and a south section.

It has previously been proposed that Atlantic Avenue and Pennsylvania Avenue be converted to a one-way pair. The Traffic Group, Inc. built a simulation model to analyze the potential of a one-way pair. To assess the feasibility of a one-way paired traffic flow pattern, several Scenarios were identified and analyzed utilizing SimTraffic. The queuing results for each Scenario are provided in Table 3, which is a discussion of each Scenario.

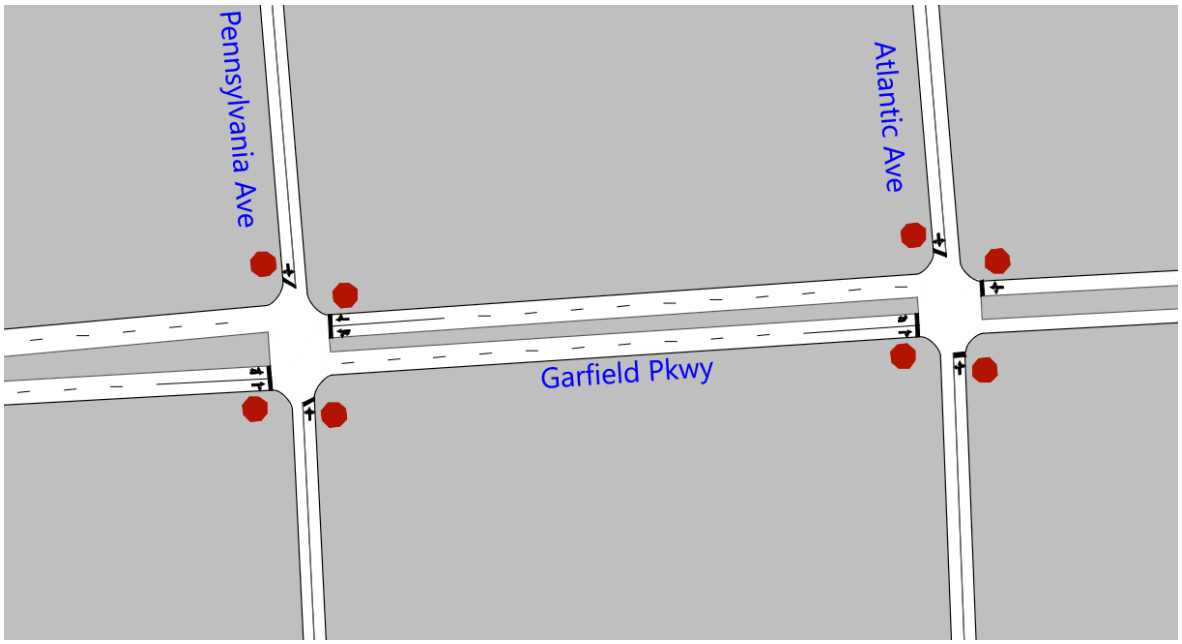
Table 3. Results of Queues for Each Scenario

Summer Saturday Peak Hour	Pennsylvania Ave at Garfield Pkwy		Atlantic Ave at Garfield Pkwy	
	Southbound	Northbound	Southbound	Northbound
	Max Queue (ft)	Max Queue (ft)	Max Queue (ft)	Max Queue (ft)
Scenario 1	242	236	234	241
Scenario 1a	301	384	256	252
Scenario 2	468	-	-	1845
Scenario 3	476	-	-	2092
Scenario 3a	551	-	-	249
Scenario 3b	1114	-	-	544
Scenario 3c	471	-	-	1142
Scenario 3d	528	-	-	593
Scenario 4	165	-	-	150
Scenario 5	144	-	-	2079
Scenario 5b	148	-	-	632
Scenario 6	-	Gridlock	Gridlock	-
Scenario 6a	-	Gridlock	Gridlock	-
Scenario 6b	-	Gridlock	Gridlock	-
Scenario 7	-	220	393	-
Scenario 8	329	1170	204	134
Scenario 8a	240	688	199	120
Scenario 8b	241	669	203	97

Note: Results are averages of 10 simulation runs.

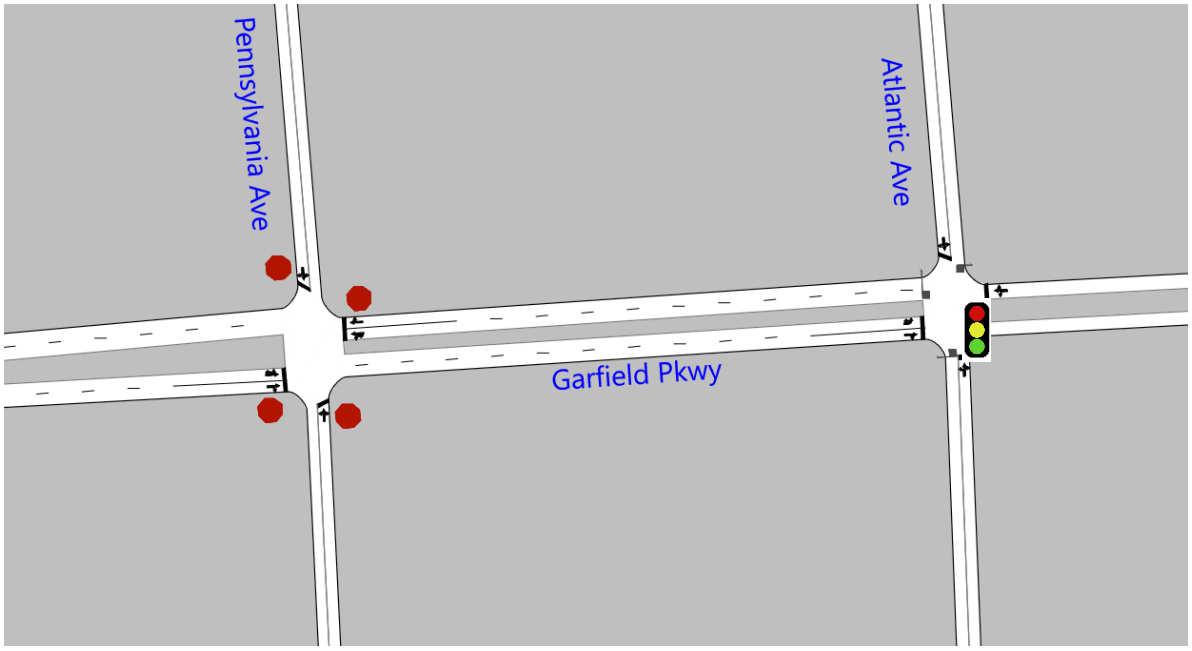
Scenario 1 – Existing Condition: Two-way traffic flow on all streets with All Way Stop control at the intersections of Garfield Parkway and Pennsylvania Avenue and Atlantic Avenue. Simulated queues on Pennsylvania Avenue and Atlantic Ave range from 234 feet to 242 feet, or approximately 10 vehicles.

Scenario 1 - Existing Condition



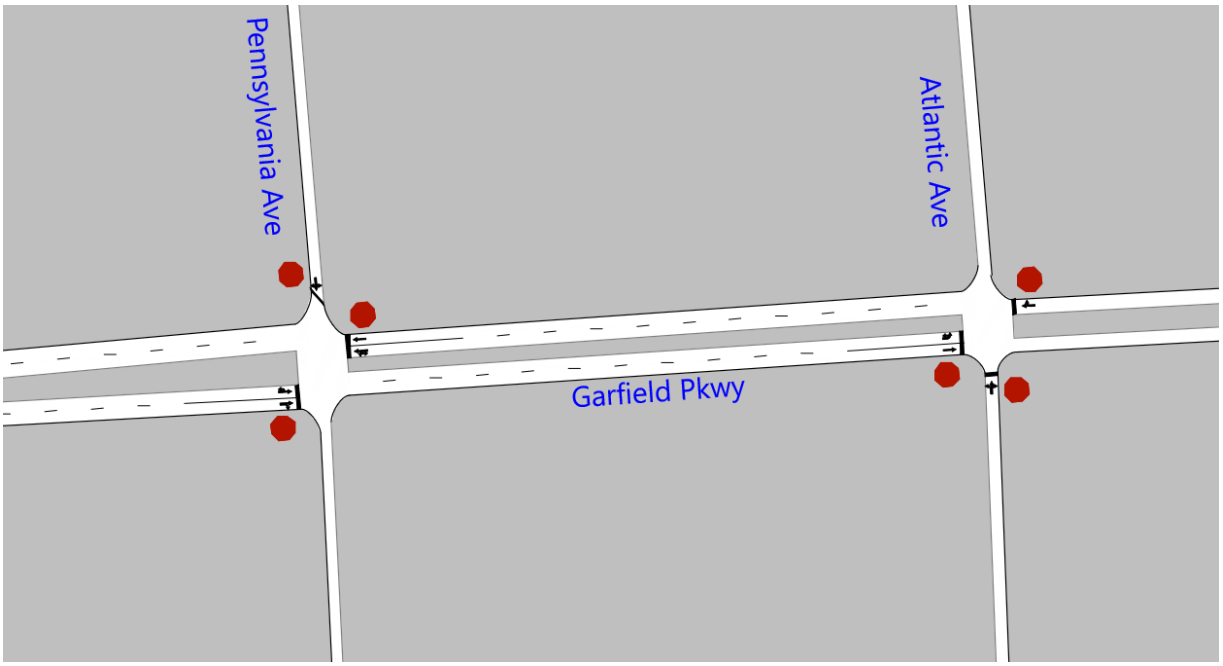
Scenario 1a – Signalized control at the intersection of Garfield Parkway and Atlantic Avenue with Exclusive Pedestrian Phasing. Simulated queues remain approximately the same for Atlantic Avenue but increase to 301 to 384 feet on Pennsylvania Avenue, or approximately 15 vehicles.

Scenario 1a - Existing Condition



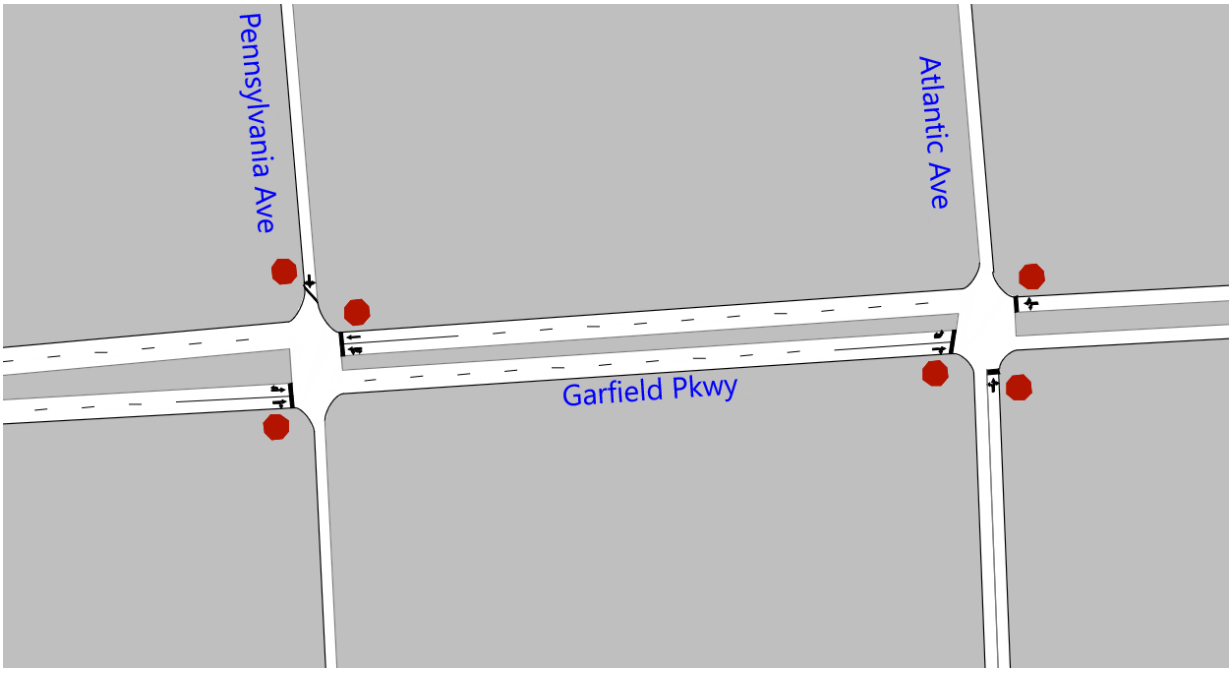
Scenario 2 – One Way, One Lane traffic flow northbound on Atlantic Avenue and southbound on Pennsylvania Avenue with STOP control. This Scenario is not viable as simulated northbound queue on Atlantic Avenue is 1,845 feet, or 74 vehicles, extending beyond Maplewood Street.

Scenario 2 - One Way, One Lane - Atlantic NB & Penn SB



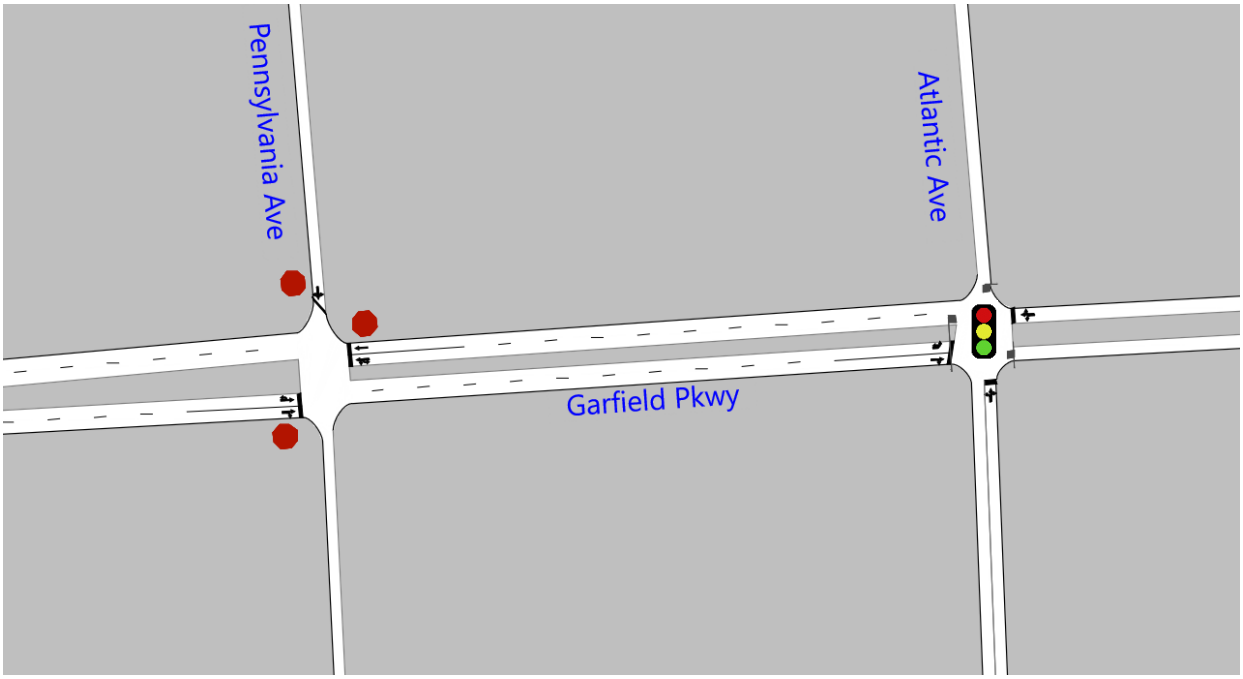
Scenario 3 – One Way, One Lane traffic flow northbound on Atlantic Avenue (north of Garfield Parkway) and southbound on Pennsylvania Avenue, with STOP control. This Scenario is not viable as simulated northbound queue on Atlantic Avenue is 2,092 feet, or 84 vehicles, extending beyond Ashwood Street.

Scenario 3 - One Way, One Lane - Atlantic NB (N of Garfield) & Penn SB



Scenario 3a – One Way, One Lane traffic flow northbound on Atlantic Avenue (north of Garfield Parkway) and southbound on Pennsylvania Avenue, with STOP control at the intersection of Garfield Parkway and Pennsylvania Avenue and Signalized control at the intersection of Garfield Parkway and Atlantic Avenue with Regular Pedestrian Phasing. This Scenario is not recommended as the simulated queue on southbound Pennsylvania Avenue extends 551 feet, approximately 22 vehicles, nearly to Central Blvd.

Scenario 3a - One Way, One Lane



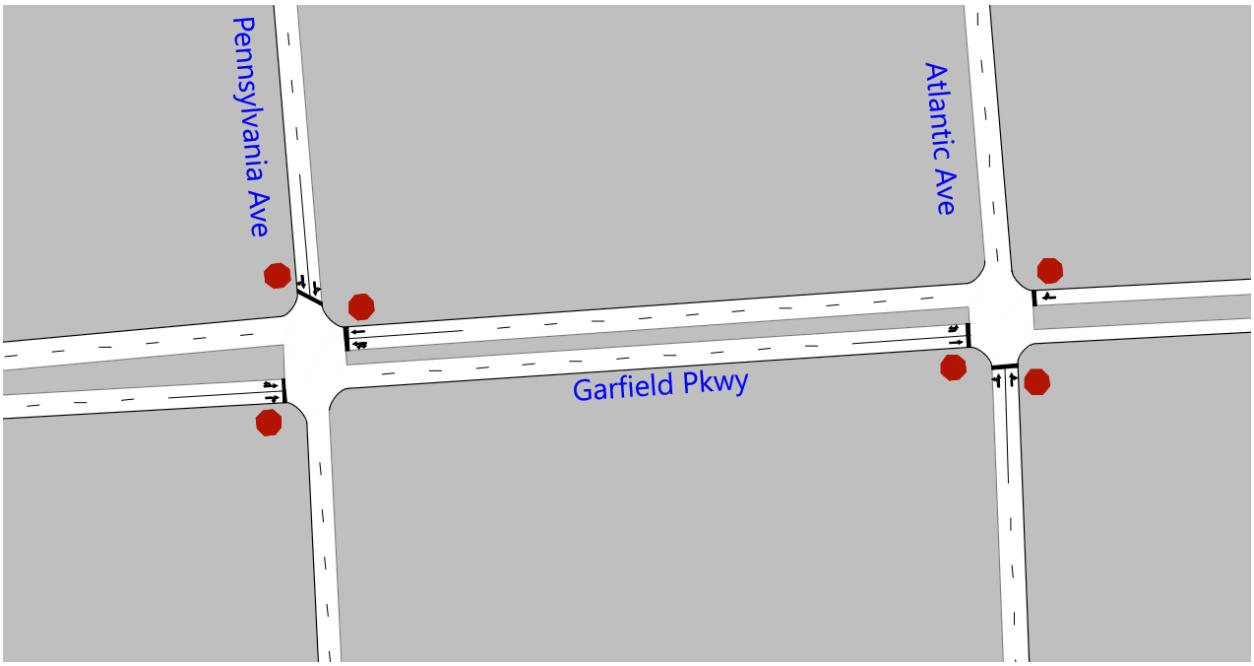
Scenario 3b – Signalized control at the intersection of Garfield Parkway and Atlantic Avenue with Exclusive Pedestrian Phasing. This Scenario is not viable as the simulated queue on southbound Pennsylvania Avenue extends 1,114 feet, approximately 45 vehicles, beyond First Street. The northbound queue on Atlantic Avenue simulated to be 544 feet, approximately 22 vehicles, nearly to Parkwood Street.

Scenario 3c – STOP control at both intersections of Garfield Parkway and Pennsylvania Avenue and Garfield Parkway and Atlantic Avenue with 25% of the northbound thru traffic diverted to DE 1 presumable to avoid congestion in the Town's core area. This Scenario is not viable as the simulated queue on northbound Atlantic Avenue extends 1,142 feet, approximately 46 vehicles, beyond Wellington Avenue. The simulated queue on southbound Pennsylvania Avenue is 471 feet, approximately 19 vehicles, extending beyond Campbell Pl.

Scenario 3d – STOP control at both intersections of Garfield Parkway and Pennsylvania Avenue and Garfield Parkway and Atlantic Avenue with 50% of the northbound thru traffic diverted to DE 1 presumably to avoid congestion in the Town's core area. This Scenario is not recommended as the simulated queues on southbound Pennsylvania Avenue and northbound Atlantic Avenue extend nearly to 600 feet.

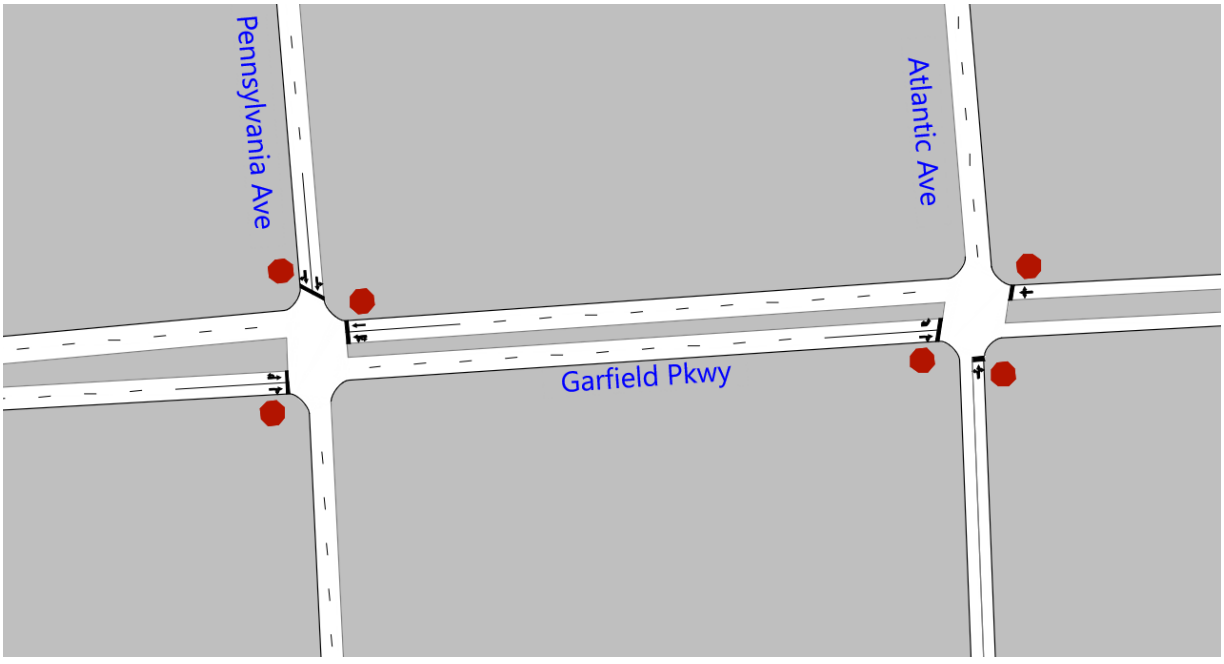
Scenario 4 – One Way, Two Lane traffic flow northbound on Atlantic Avenue and southbound on Pennsylvania Avenue with STOP control. This Scenario results in the shortest queues, 165 feet on Pennsylvania Avenue and 150 feet on Atlantic Avenue.

Scenario 4 - One Way, Two Lane



Scenario 5 – One Way, Two Lane traffic flow northbound on Atlantic Avenue (north of Garfield Parkway) and southbound on Pennsylvania Avenue with STOP control. This Scenario is not viable as the simulated queue on northbound Atlantic Avenue is 2,079 feet or 83 vehicles, extending nearly to Cedarwood Lane.

Scenario 5 - One Way, Two Lane - Atlantic NB (N of Garfield) & Penn SB

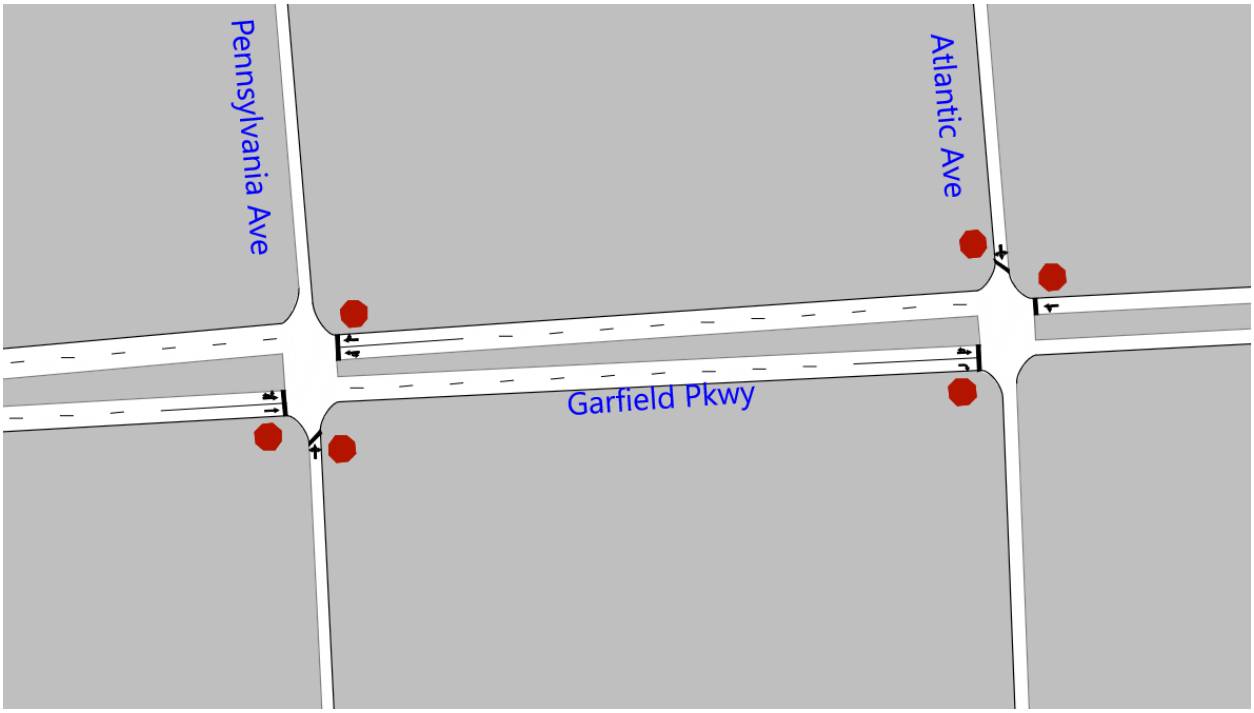


Scenario 5a –STOP control at both intersections with 25% of northbound thru traffic diverted to DE 1 presumably to avoid congestion in the Town's core area.

Scenario 5b - STOP control at both intersections with 50% of northbound thru traffic diverted to DE 1 presumably to avoid congestion in the Town's core area. This Scenario is not recommended as the northbound queue on Atlantic Avenue is simulated to be 632 feet or 25 vehicles, nearly to Parkwood Street.

Scenario 6 – One Way, One Lane traffic flow southbound on Atlantic Avenue and northbound on Pennsylvania Avenue with STOP control at both intersections. This Scenario is not viable as gridlock is projected to occur.

Scenario 6 - One Way, One Lane - Atlantic SB & Penn NB

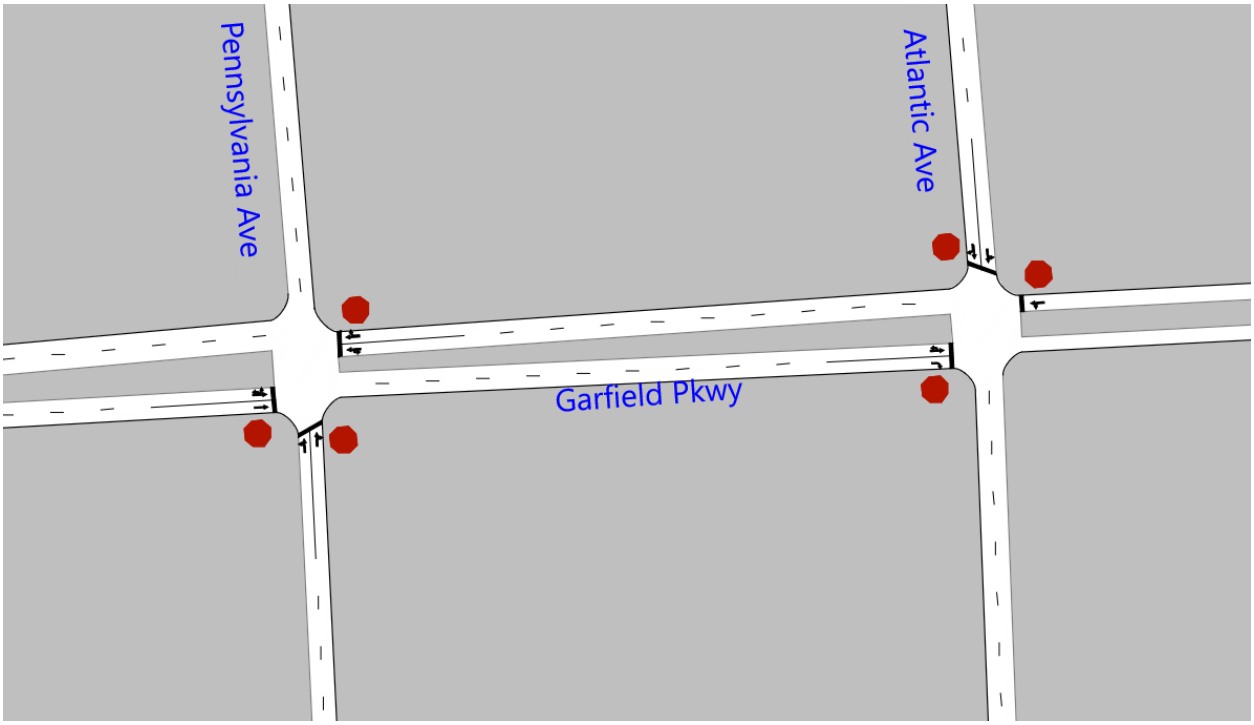


Scenario 6a – STOP control at both intersections with 25% of the northbound thru traffic diverted to DE 1 presumably to avoid congestion in the Town's core area. This Scenario is not viable as gridlock is projected to occur.

Scenario 6b – STOP control on both intersections with 50% of the northbound thru traffic diverted to DE 1 presumably to avoid congestion in the Town's core area. This Scenario is not viable as gridlock is projected to occur.

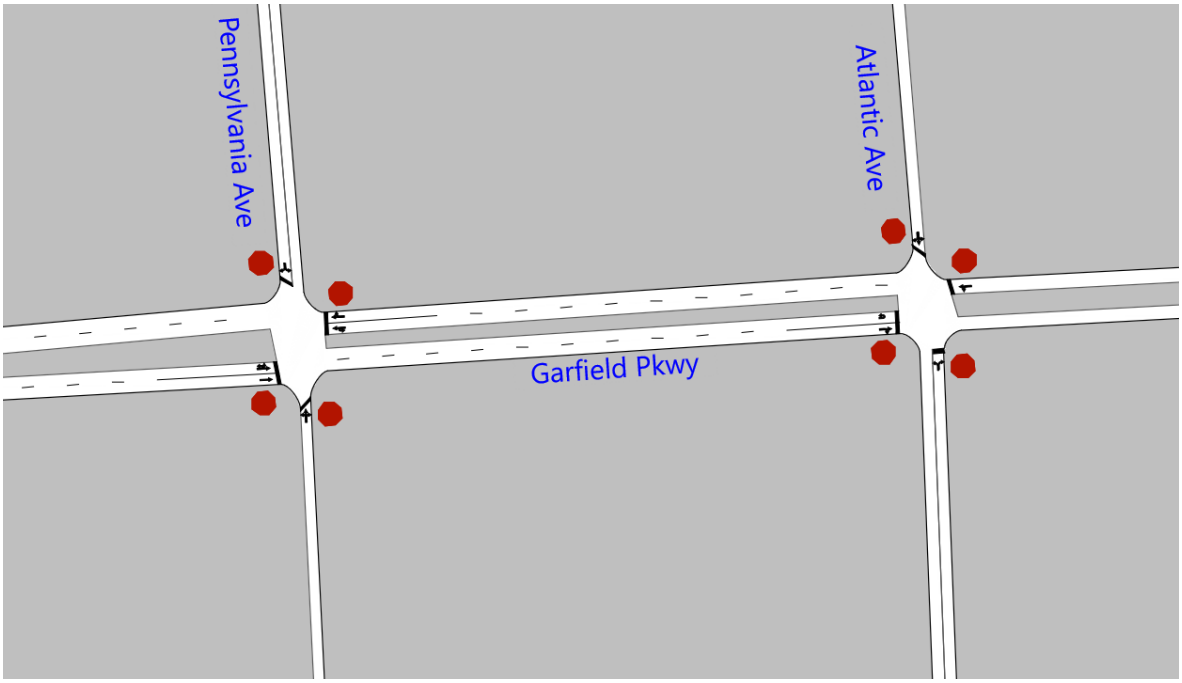
Scenario 7 – One Way, Two Lane traffic flow southbound on Atlantic Avenue and northbound on Pennsylvania Avenue with STOP control. This Scenario results in longer queues than Scenario 4, but the queues are acceptable. The disadvantage of this Scenario is that northbound traffic on DE 1 could use northbound Pennsylvania Avenue as an alternative route should DE 1 be experiencing congestion in this area. The diversion of northbound traffic from DE 1 to Pennsylvania Avenue would result in more congestion in the Core area.

Scenario 7 - One Way, Two Lane - Atlantic SB & Penn NB



Scenario 8 – One Way One Lane traffic flow southbound on Atlantic Avenue (north of Garfield) and northbound on Pennsylvania Avenue (south of Garfield) with STOP control. This Scenario is not viable as the simulated queue on northbound Pennsylvania Avenue is 1,170 feet or 47 vehicles.

Scenario 8 - One Way, One Lane - Atlantic SB (N of Garfield) & Penn NB (S of Garfield)



Scenario 8a – STOP control at both intersections with 25% of the northbound through traffic diverted to DE 1 presumably to avoid congestion in the Town's core area.

Scenario 8b – STOP control at both intersections with 50% of the northbound through traffic diverted to DE 1 presumably to avoid congestion in the Town's core area.

In summary, the viable One Way, Two Lane Scenarios are discussed as follows.

Scenario 4 – One Way, Two Lane traffic flow northbound on Atlantic Avenue and southbound on Pennsylvania Avenue. This Scenario results in the shortest queues, 165 feet on Pennsylvania Avenue and 150 feet on Atlantic Avenue.

Scenario 7 – One Way, Two Lane traffic flow southbound on Atlantic Avenue and northbound on Pennsylvania Avenue. This Scenario results in longer queues than Scenario 4, but the queues are acceptable. The disadvantage of this Scenario is that northbound traffic on DE 1 could use northbound Pennsylvania Avenue as an alternative route should DE 1 be experiencing congestion in this area. The diversion of northbound traffic from DE 1 to Pennsylvania Avenue would result in more congestion in the Core area.

Crash Data

Crash data for a three-year period from November 30, 2020, to November 30, 2023, was obtained from DelDOT for SR 26, Garfield Parkway, Atlantic Avenue, and Pennsylvania Avenue. Crash data is contained in Appendix B.

Garfield Parkway: Fifteen crashes occurred on SR 26, Garfield Parkway, between SR 1 and the Atlantic Coast. Two crashes occurred during the 2 months of 2020; 4 crashes occurred during 2021; 8 crashes occurred during 2022; and 1 crash occurred in the 11 months of 2023.

The months of July and December have 4 crashes each. Two crashes occurred before noon, five crashes occurred between noon and 6 pm, and eight crashes occurred between 6 pm and midnight. One crash on July 29, 2022, involved a bicycle and resulted in a personal injury. None of the other crashes involved a bicyclist or a pedestrian.

Atlantic Avenue: Five crashes occurred on Atlantic Avenue between November 30, 2020, and November 30, 2023. Three occurred in 2021 and two in 2022. Two occurred during the month of May, one in July, and two in August. Two occurred before noon and three occurred in the afternoon. None of the crashes resulted in personal injury and none of the crashes involved a pedestrian or a bicyclist.

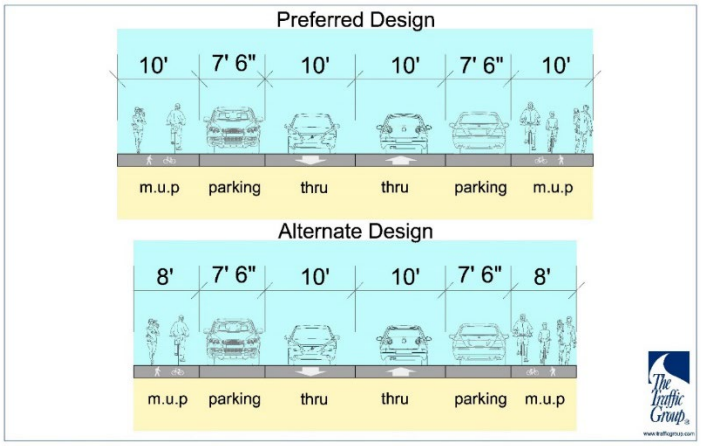
Pennsylvania Avenue: Eleven crashes occurred on Pennsylvania Avenue between November 30, 2020, and November 30, 2023. Four occurred in 2021, five occurred in 2022, and two occurred during the first 11 months of 2023. Two crashes occurred during July and four crashes occurred during August. Seven crashes occurred before noon and four crashes occurred in the afternoon. One crash, on August 29, 2021, involved a bicycle and resulted in personal injury. One crash, on June 28, 2022, resulted in a personal injury. None of the other crashes involved a bicyclist or a pedestrian or resulted in personal injury.

Complete Street Concepts

The Town of Bethany Beach is an ideal candidate to apply the Complete Street principles given the number of pedestrians and bicycles sharing the roadways with motorized vehicles. Challenges arise, however, given the number of driveways accessing private properties on both Atlantic Avenue and Pennsylvania Avenue. Objectives were to provide a 10-foot multi-use path on both sides of Atlantic Avenue and Pennsylvania Avenue while providing for as much parking as possible to meet demand.

The preferred recommended alternative is to provide for 10-foot travel lanes, 7.5-foot parking lanes and 10-foot multi-use paths, as shown in Figure 7. However, in some locations, the muti-use path will narrow due to limited right-of-way and other obstacles. Multi-use paths are preferred to separate sidewalks and bike lanes because of the number of pedestrians, children, and beach gear. The travel lanes can be marked with sharrows so that the serious bikers can utilize the travel lanes in lieu of the multi-use path.

Figure 7. Preferred and Alternate Design



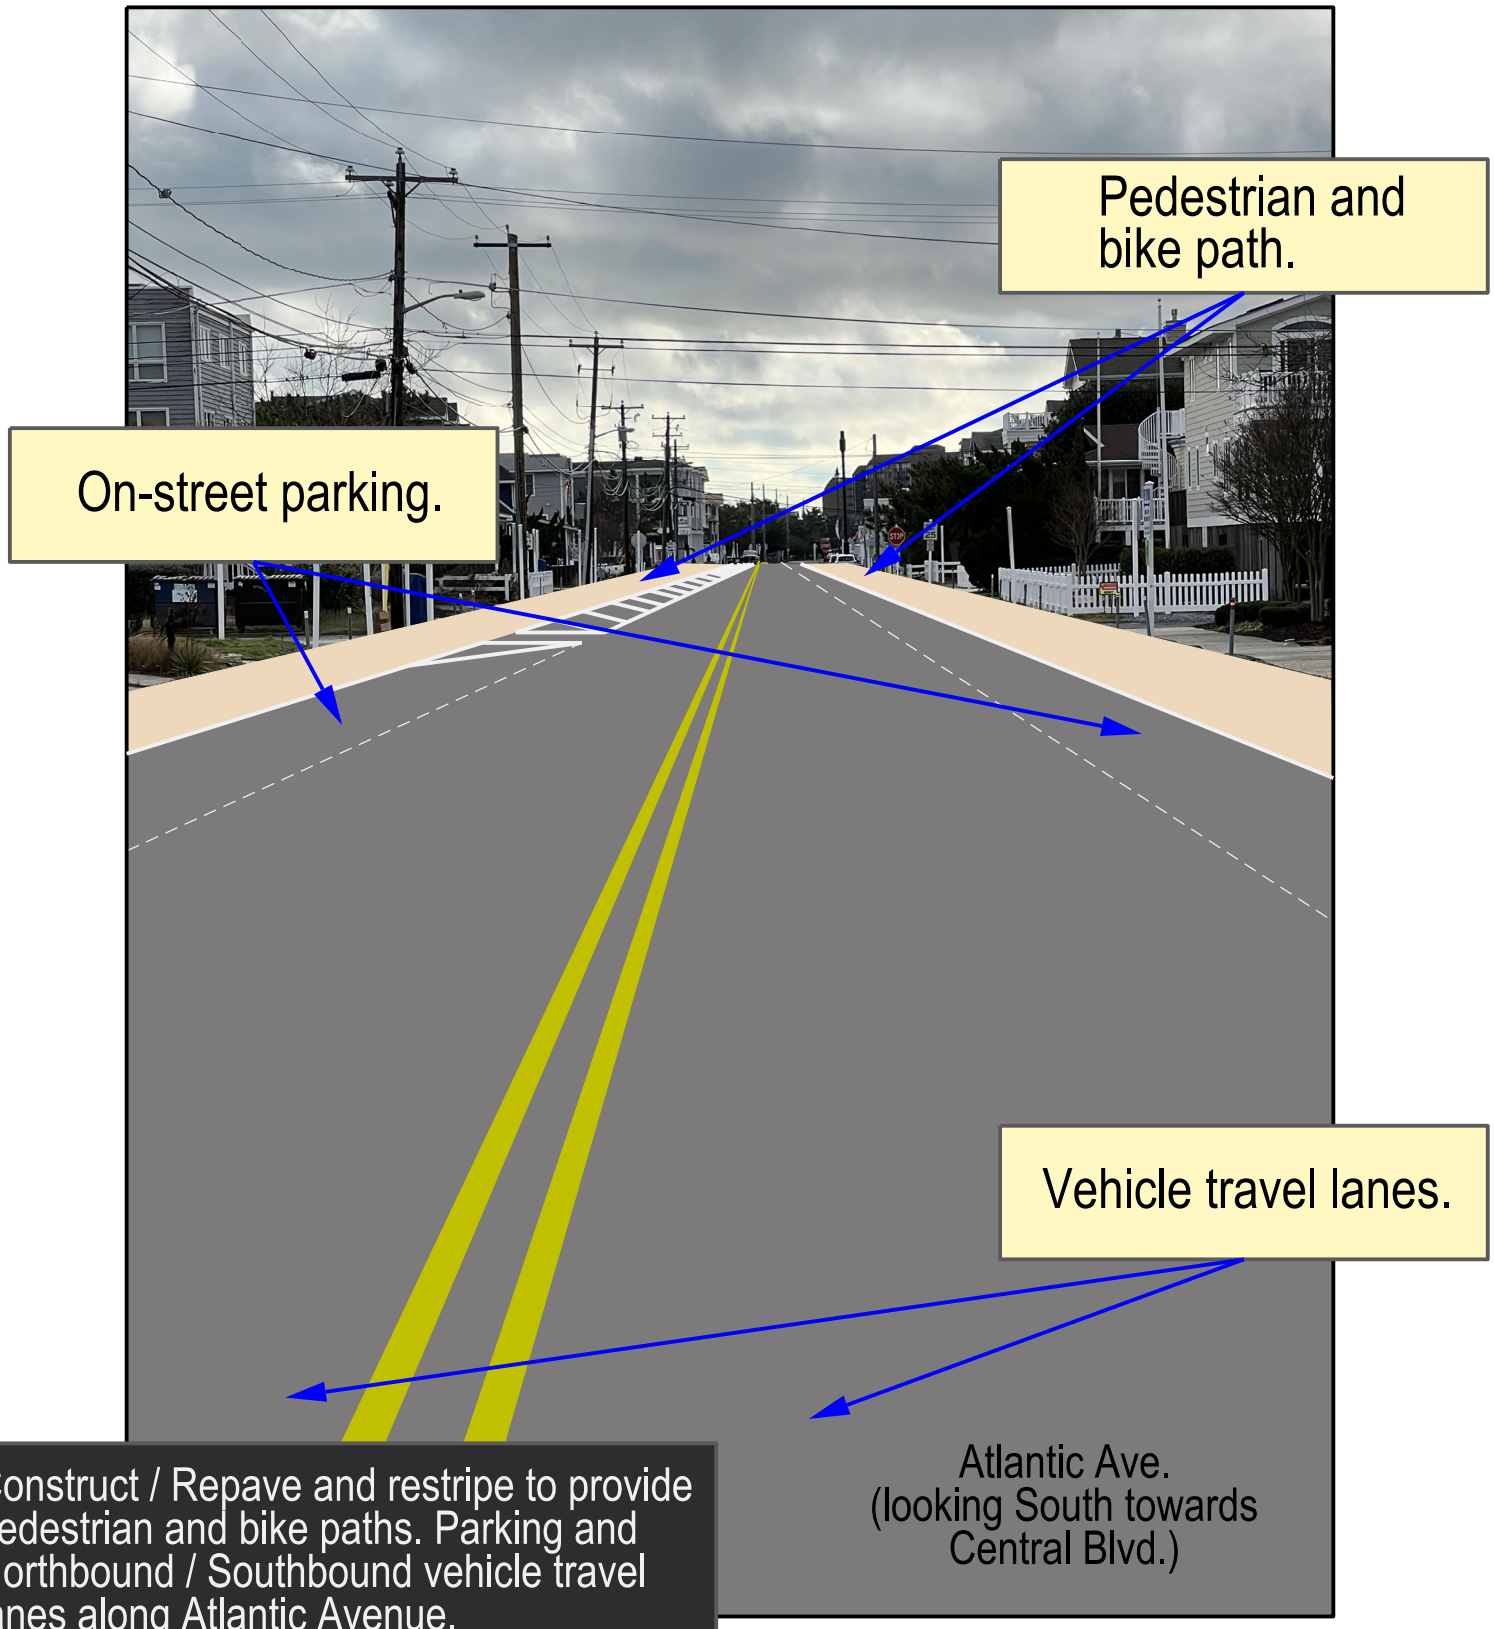
Preliminary conceptual plans are provided in Appendix C. These conceptual plans are based on information provided Near Map. Should these concepts move forward to engineering designs, roadway surveys should be conducted to accurately locate rights-of-way. Obstacles which will prevent the provision of the preferred design include:

- Driveways to private residences and businesses
- Utility Poles
- Trees
- Drainage

We recommend that crosswalks be provided at all intersections as shown on the concepts.

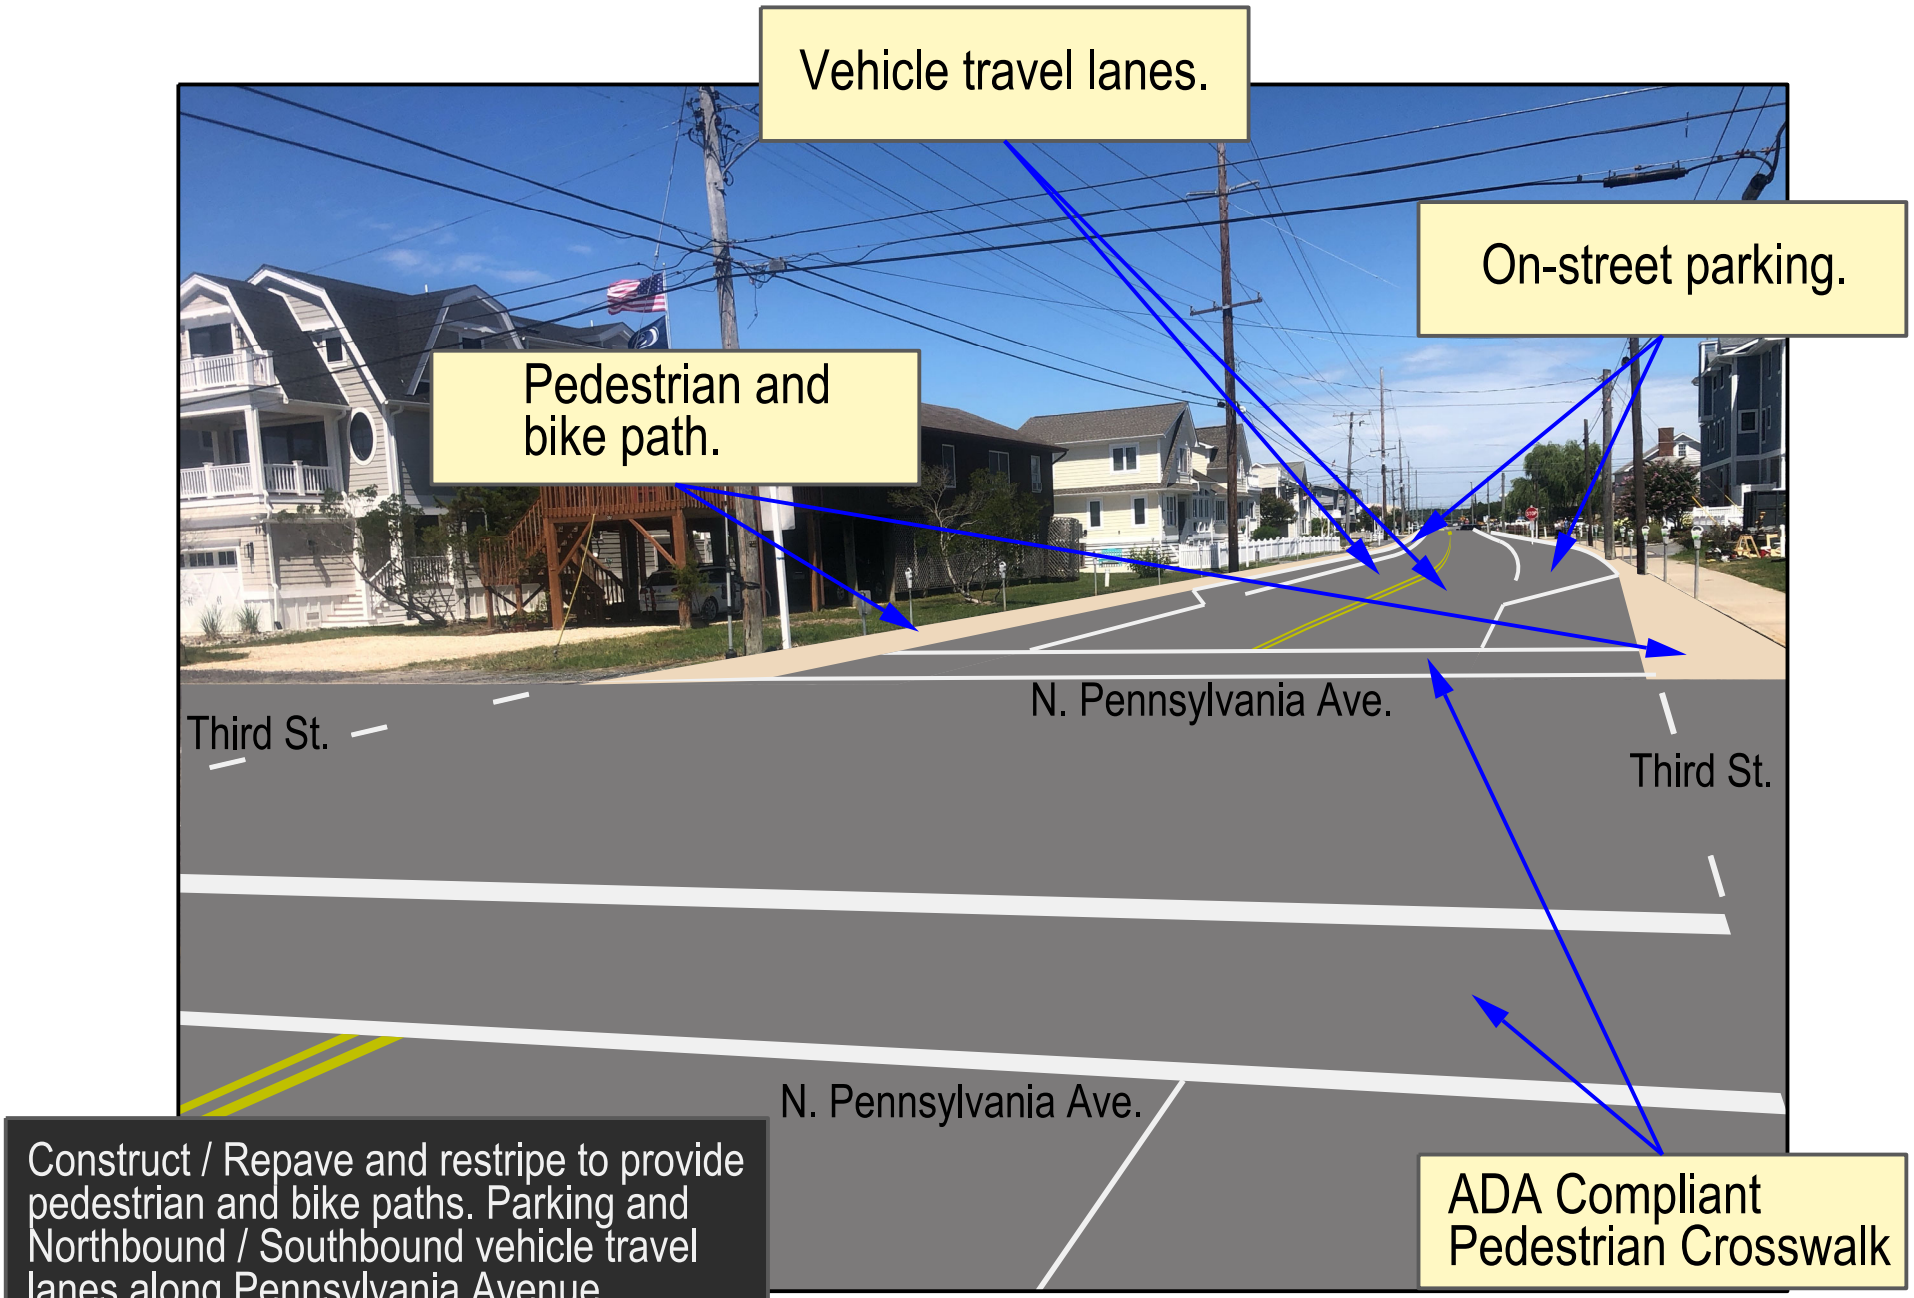
Please note that these illustrations maintain the existing Two Way, Two Lane traffic flow pattern. Should the One Way, Two Lane traffic flow be adopted, the double yellow center line would be replaced with a single dotted white line.

Ground level photographs were utilized to illustrate the application of the recommendations as shown in the following Figures.



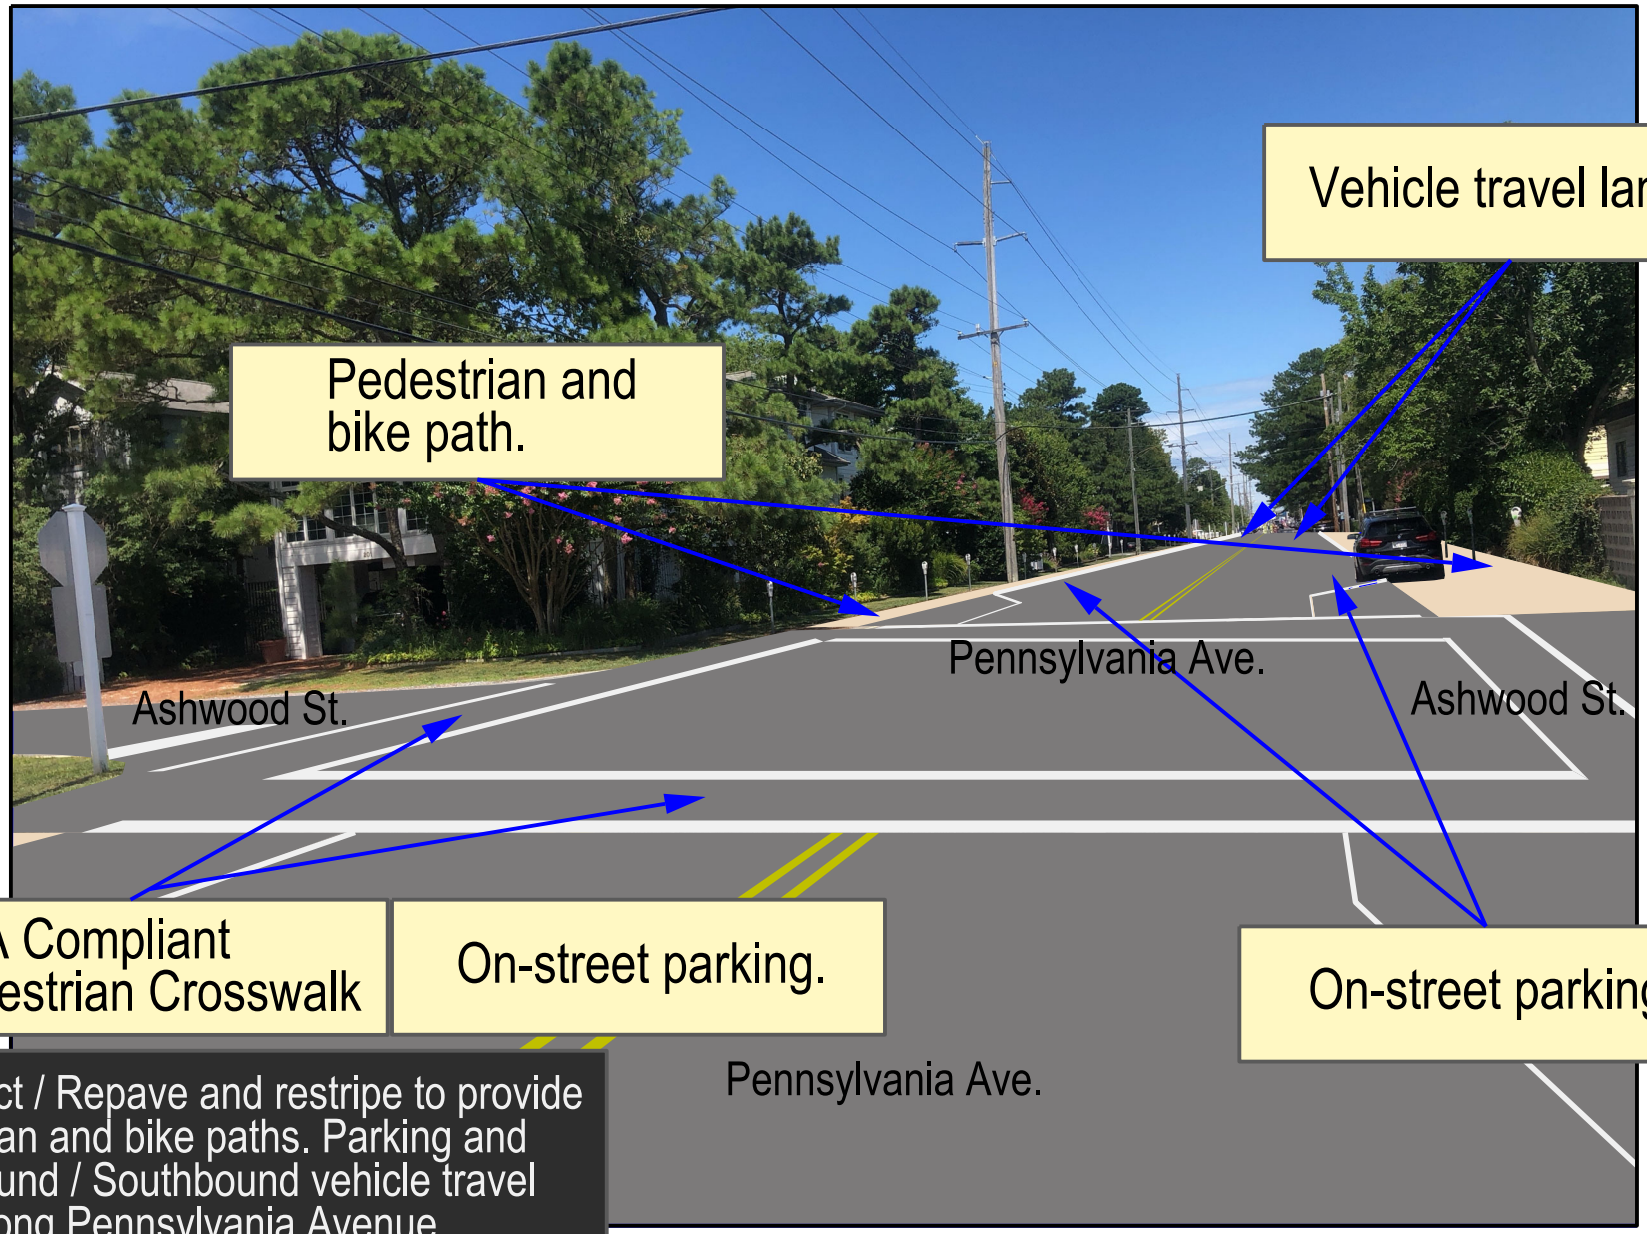
Construct / Repave and restripe to provide pedestrian and bike paths. Parking and Northbound / Southbound vehicle travel lanes along Atlantic Avenue.

NOTE:
The two-way traffic flow, shown, may switch to a two lane one-way flow. If one-way two lane traffic flow is implemented, the double yellow center line would be replaced with dotted white center line.



Construct / Repave and restripe to provide pedestrian and bike paths. Parking and Northbound / Southbound vehicle travel lanes along Pennsylvania Avenue.

NOTE:
The two-way traffic flow, shown, may switch to a two lane one-way flow.
If one-way two lane traffic flow is implemented, the double yellow center line would be replaced with dotted white center line.



Construct / Repave and restripe to provide pedestrian and bike paths. Parking and Northbound / Southbound vehicle travel lanes along Pennsylvania Avenue.

NOTE:
The two-way traffic flow, shown, may switch to a two lane one-way flow.
If one-way two lane traffic flow is implemented, the double yellow center line would be replaced with dotted white center line.

Recommendations

The Traffic Group, Inc. recommends that the Town of Bethany Beach continue to seek improvements to provide for the safety of all users of their streets. The provision of safe paths for non-motorized vehicles is a priority. We recommend that The Town of Bethany Beach seek either an Action Plan Grant or an Implementation Grant from the US DOT under their Safe Streets For All (SS4A) program. Fortunately, the number of crashes within the town are relatively low, the potential for crashes is extremely high given the high volume of non-motorized vehicles sharing the streets with motorized vehicles. The Traffic Group, Inc. is able to assist the Town of Bethany Beach in applying for one or both of these grants.

Should the Town of Bethany Beach move forward with a One Way, Two Lane traffic flow pattern on Pennsylvania Avenue and Atlantic Avenue, Signing and Pavement Marking Plans would need to be developed. The Traffic Group, Inc. is able to assist the Town of Bethany Beach is developing these plans.

Finally, we recommend that the Town of Bethany Beach research parking apps which can identify vacant parking spaces and inform the public via a cell phone app.

GARFIELD PARKWAY (DE SR 26) AND TREETOP LANE AND WAWA

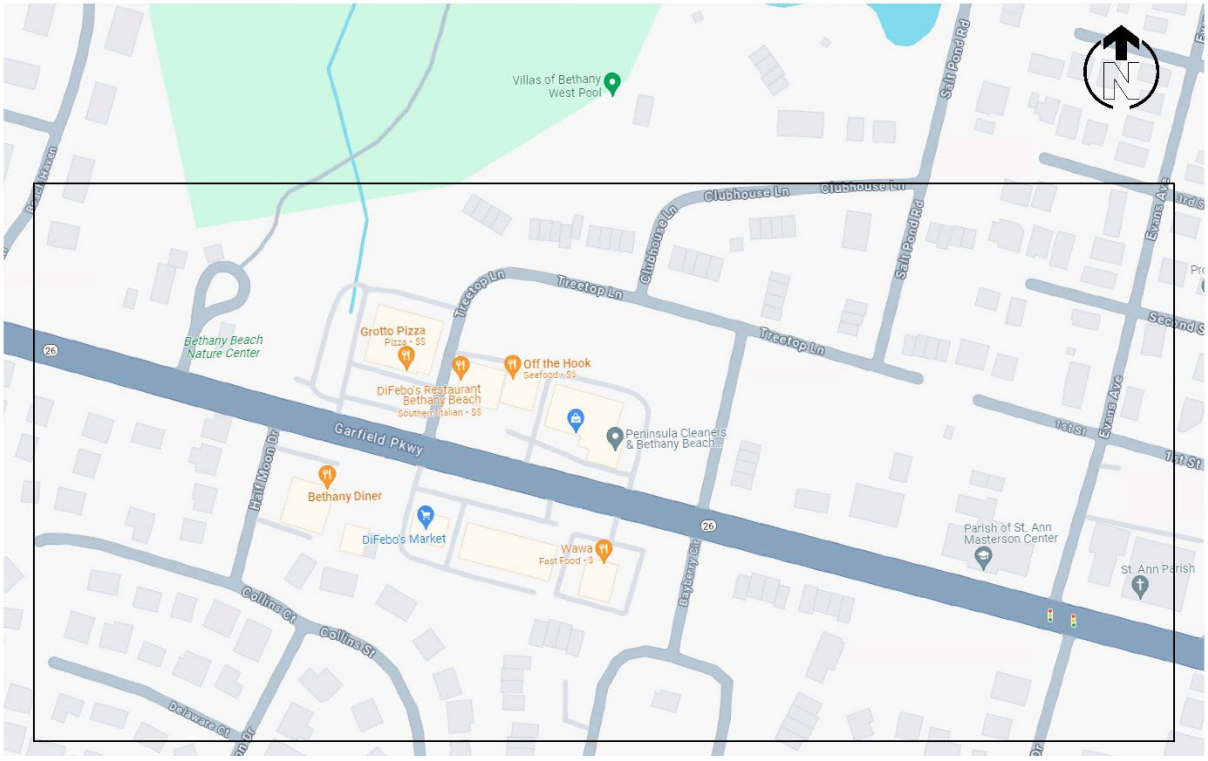
Study Purpose

Several businesses are in an approximately 500-foot area along Garfield Parkway, Delaware SR 26 between Treetop Lane and the Wawa. The intersections of DE 26 with Treetop Lane and the Wawa access are Stop controlled. Significant congestion and queuing have been experienced in this area. Limited parking leads to a significant amount of pedestrian traffic crossing SR 26. In order to provide for the safety of all roadway users, signal warrant analyses and safety analyses were conducted for this roadway section.

Study Area

The study area, Figure 8, includes numerous businesses such as the Bethany Diner, Grotto Pizza, DiFebo's, Off the Hook, WaWa, and other retail establishments. Residential areas are located on the north and south sides of SR 26 with a considerable number of pedestrians and bicyclists. Furthermore, SR 26 is utilized by both motorized and non-motorized vehicles and pedestrians to access the downtown area and beaches.

Figure 8. Study Area Map



Existing Conditions

In the study area, Garfield Parkway, DE SR 26, is approximately 33 feet wide providing for two 11-foot lanes and one center lane used for left turns. A 5-foot shoulder is provided on each side of the travel lanes which are used by bicyclists, but it does not appear that the lanes are marked for bicycle use. A 5-foot sidewalk is provided on each side of the roadway.

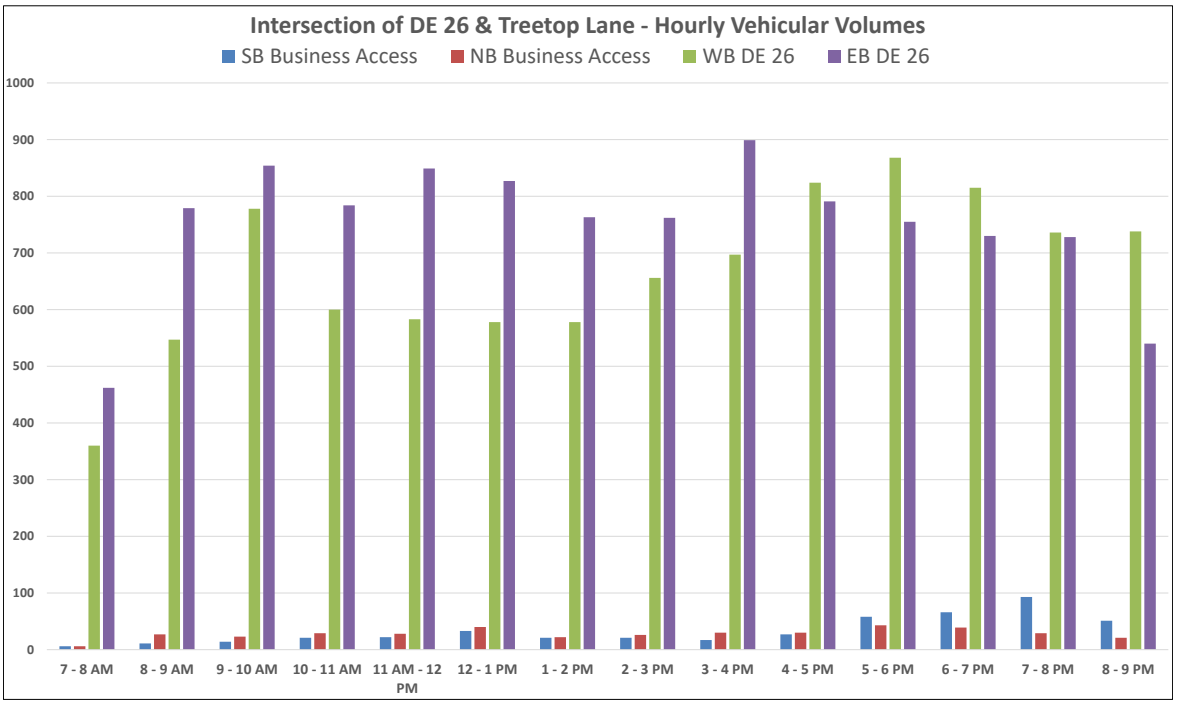
Garfield Parkway, DE SR 26 – Looking East

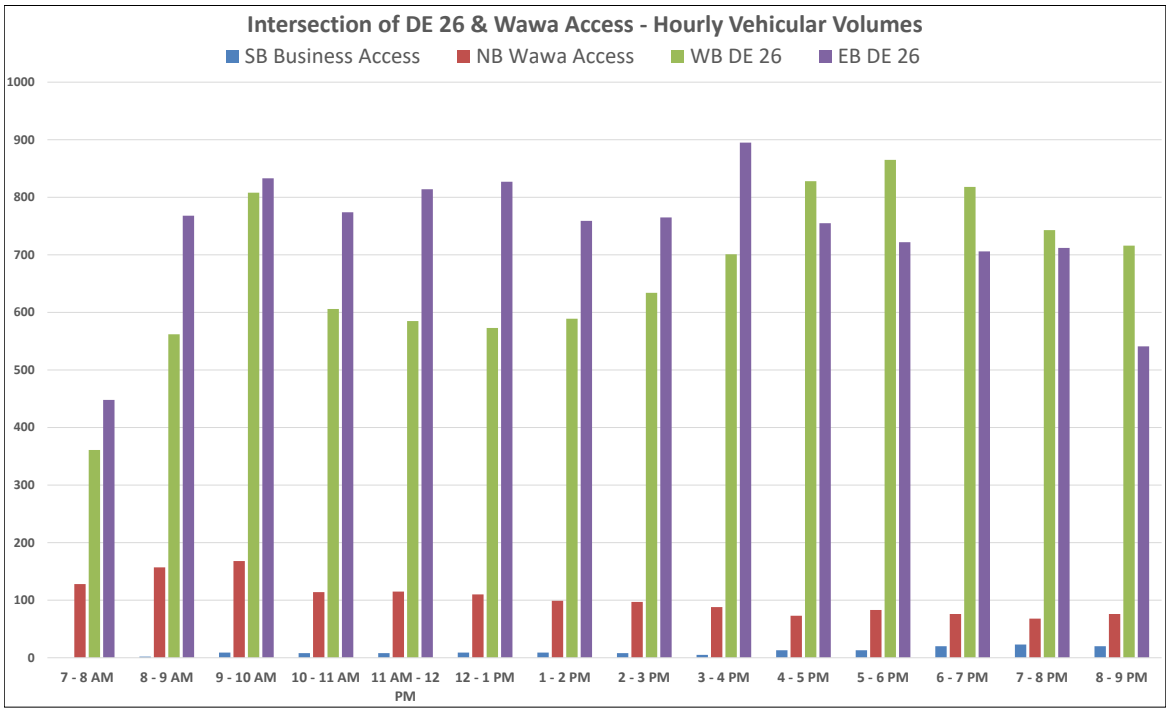
Garfield Parkway, DE SR 26 – Looking West

Between Treetop Lane and the access to WaWa there is one additional curb cut on each side of the roadway which do not align with each other. These numerous curb cuts in a short distance of approximately 400 feet create a significant number of conflict points.

Traffic Volumes

Vehicular, bicycle, and pedestrian volumes were collected at the two study intersections on Saturday, August 18, 2023, from 7 AM through 9 PM. Count summary sheets are provided in Appendix A. Summaries are provided in the graphs below.





Tables 4 and 5 provide the volumes of pedestrians and bicycles on each leg of the intersections by hour. Of note is the high volume of pedestrians crossing DE SR 26 at Tree Top Lane.

Table 4. Pedestrian and Bicycle Volumes at DE SR 26 and Treetop Lane

Capacity Analyses

Using the Highway Capacity Software, Level of Service evaluations were completed for the two study intersections. As shown in Table 6, the side streets are experiencing significant delay. Pedestrian Levels of Service are also deficient.

Table 6. Results of Intersection Capacity Analysis

Intersection		Existing Traffic	
Type of Control	Movement	SAT AM	SAT PM
		LOS / Delay (sec)	
DE 26 (E/W) & Treetop Lane (N/S)			
Two-Way Stop	EB L	A / 9.7	B / 10.3
	WB L	B / 10.6	A / 9.4
	NB LTR	F / 78.5	F / 101.8
	SB LTR	F / 50.7	F / 64.4
Pedestrian Level of Service		LOS / Proportion of Dissatisfied Peds	
Crossing DE 26 West Approach		F / 0.642	F / 0.633
Crossing DE 26 East Approach		F / 0.642	F / 0.634
DE 26 (E/W) & Wawa Access (N/S)			
Two-Way Stop	EB L	A / 9.5	A / 9.9
	WB L	B / 10.6	A / 9.4
	NB LT	F / 260.9	F / 111.5
	NB R	C / 22.1	B / 14.9
	SB LTR	E / 36.6	D / 30.0
Pedestrian Level of Service		LOS / Proportion of Dissatisfied Peds	
Crossing DE 26 West Approach			F / 0.629
Crossing DE 26 East Approach		F / 0.637	

Notes: Results are based on HCS Version 2023 Reports.

Crash Data

Crash data for DE SR 26 from the Assawoman Canal to DE SR 1 was obtained from DelDOT for the period from July 22, 2017, through June 6, 2023. Please see Tables 7 and 8. Two crashes, both involving pedestrians or a bicycle, occurred at the intersection of DE SR 26 and Treetop Lane. Seven crashes occurred from Bayberry Circle to Treetop Lane.

Table 7. Crash Data Summary – SR 26 (Between SR 1 and Assawoman Canal) Intersection Related

Intersection Related Crash	Year							Total
Intersections along SR 26	2017 (7/22-12/31)	2018	2019	2020	2021	2022	2023 (1/1-6/6)

Signal Warrant Analysis

Utilizing the procedures in the Manual on Uniform Traffic Control Devices (MUTCD), a Traffic Signal Warrant Analysis was completed for the two study intersections. The MUTCD identifies nine warrants as discussed below.

> **Warrant 1: Eight-Hour Vehicular Volume:** *This warrant considers the vehicular volume on the major and minor approaches for a typical 8-hour period. It is divided into two Conditions, A and B. Condition A, "Minimum Vehicular Volume," is intended for application at locations where a large volume of intersecting traffic is the principal reason to consider installing a Traffic Signal. Condition B, "Interruption of Continuous Traffic" is intended for application at locations where the volume on a major street is so heavy that traffic on a minor intersecting street suffers excessive delay or conflict in entering or crossing the major street. If neither the Condition A nor Condition B warrant is met, the "Combination of Condition A and B" warrants are evaluated.*

Warrant 2: Four-Hour Vehicular Volume: *This warrant is intended to be applied where the volume of intersecting traffic is the principal reason to consider installing a Traffic Signal.*

Warrant 3: Peak Hour: *This warrant is intended for use at a location where traffic conditions are such that for a minimum of 1 hour of an average day, the minor street traffic suffers undue delay when entering or crossing the major street.*

Warrant 4: Pedestrian Volume
This warrant is intended for application where the traffic volume on a major street is so heavy that pedestrians experience excess delay in crossing the street.

Warrant 5: School Crossing
This warrant is intended for application where the fact that school children cross the major street is the principal reason to consider installing a traffic signal.

Warrant 6: Coordinated Signal System
This warrant is intended to enhance the progressive movement in a coordinated signal system.

Warrant 7: Crash Experience
This warrant is intended for application where the severity and frequency of crashes are the principal reason to consider installing a Traffic Signal.

Warrant 8: Roadway Network
This warrant is intended for application where a Traffic Signal might encourage concentration and organization of traffic flow on a roadway network.

Warrant 9: Intersection Near a Highway Grade Crossing

As shown in Figures 9 and 10, the first three warrants pertaining to motor vehicular volumes are not met. Warrants 5 through 9 do not apply.

Warrant 4 is the pedestrian warrant which reads as follows:

Section 4C.05 Warrant 4, Pedestrian Volume

Support:

01 The Pedestrian Volume signal warrant is intended for application where the traffic volume on a major street is so heavy that pedestrians experience excessive delay in crossing the major street.

Standard:

02 **The need for a traffic control signal at an intersection or midblock crossing shall be considered if an engineering study finds that one of the following criteria is met:**

- **A. For each of any 4 hours of an average day, the plotted points representing the vehicles per hour on the major street (total of both approaches) and the corresponding pedestrians per hour crossing the major street (total of all crossings) all fall above the curve in Figure 4C-5; or**
- **B. For 1 hour (any four consecutive 15-minute periods) of an average day, the plotted point representing the vehicles per hour on the major street (total of both approaches) and the corresponding pedestrians per hour crossing the major street (total of all crossings) falls above the curve in Figure 4C-7.**

Sli, 220725\INITIAL\sigwar-Treetop.xlsx-Sum1, F08/22/23

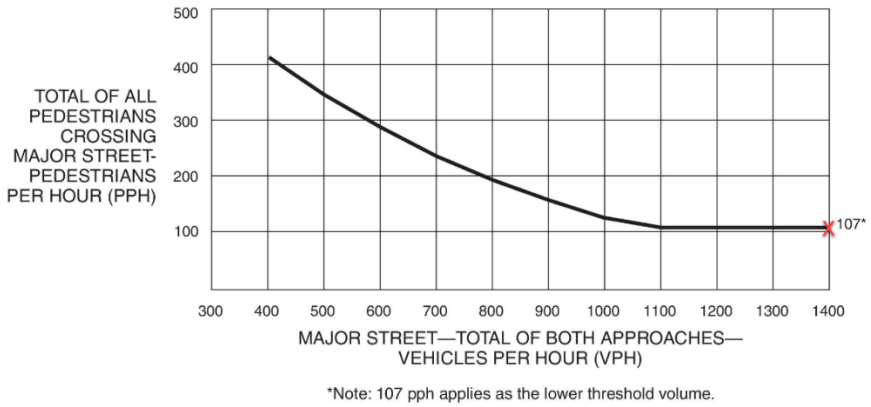
Figure 4C-5. Warrant 4, Pedestrian Four-Hour Volume



*Note: 107 pph applies as the lower threshold volume.

Figure 4C-7. Warrant 4, Pedestrian Peak Hour

*Note: 133 pph applies as the lower threshold volume.

The average of the major street volume is over 1,400 vph per hour. As shown by the red "X" in Figure 4C-5, the warrant threshold for pedestrians crossing the major road is 107 for each of a 4-hour period, and as shown by the red X in Figure 4C-07, the warrant threshold for pedestrians crossing the major road is 133 for any 1-hour period. As previously shown in Table 4 (Page 23), the highest number of pedestrians observed to be crossing SR 26 at Treetop Lane is 79 from 9 AM to 10 AM. Therefore, the MUTCD pedestrian warrant for a traffic signal is not met.

Recommendations

Given that none of the Traffic Signal Warrants are met, other considerations ought to be considered for improving the safety and operation of all roadway users in this area. Three recommendations are discussed below.

Reduce Conflict Points: Consideration should be given to closing unnecessary driveways which would not also reduce conflict points but also provide additional parking.

Rectangular Rapid Flashing Beacons: Consideration should be given to installing Rectangular Rapid Flashing Beacons at the intersection of DE SR 26 and Treetop Lane. While crosswalks are provided on the east and west legs, crosswalks should also be provided on the north and south legs.

= Rectangular Rapid Flashing Beacon (RRFB)

Traffic Signal Justification Study: Conduct a DelDOT Traffic Signal Justification Study which considers items in addition to the MUTCD Traffic Signal Warrants.

DE SR 26 FROM ASSAWOMAN CANAL TO DE SR 1

Study Purpose

Delaware State Route 26, Garfield Parkway, serves as a secondary gateway to the Town of Bethany Beach, with Delaware State Route 1 being the primary gateway. According to traffic data collected in August 2022, traffic volumes on DE SR 26 swell to 20,000 or more during the summer months. Table 9 provides the weekday and weekend averages.

Table 9. Average Daily Traffic on DE SR 26, August 2022

Location on State Route 26	Weekday Average			Weekend Average		
	EB	WB	Total	EB	WB	Total
Near Leatherback Lane	10,441	9,963	20,404	10,881	10,872	21,753
Near Half Moon Drive	10,284	9,916	20,200	10,768	10,757	21,525

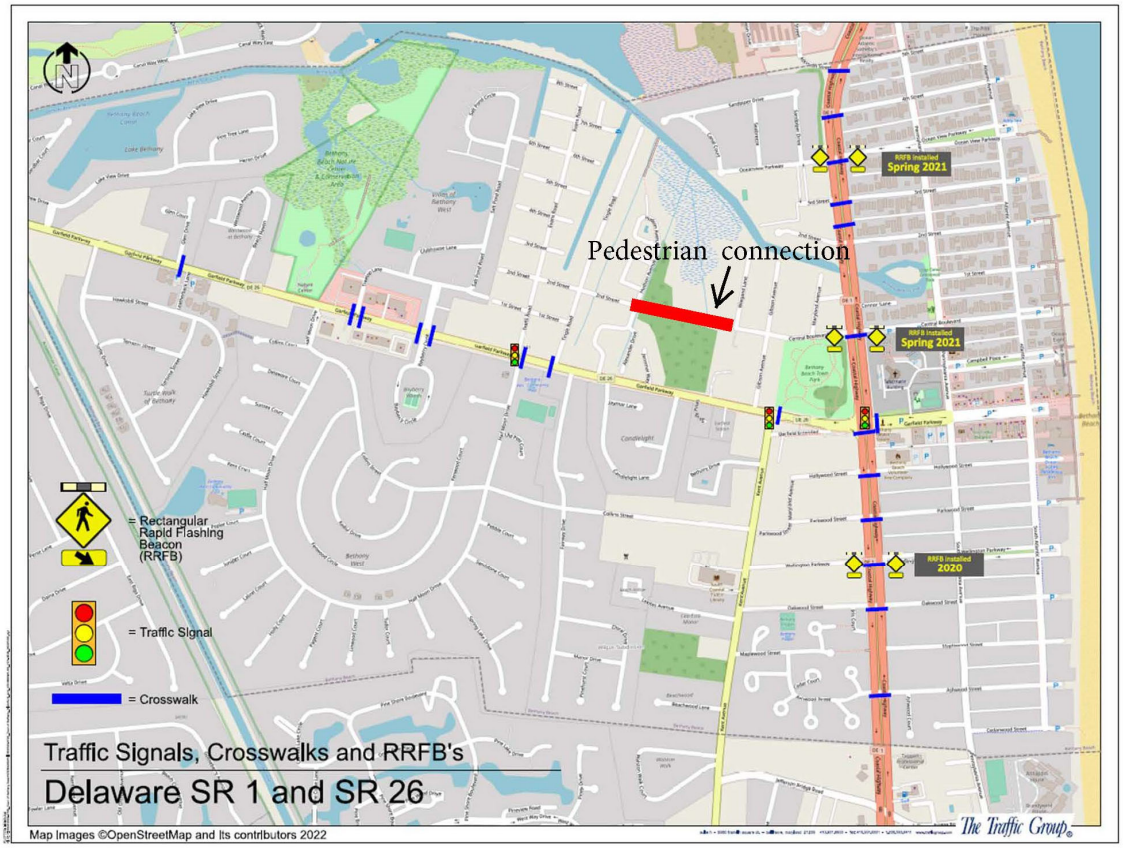
While only pedestrian and bicycle volumes were collected at two locations along DE SR 26, Treetop Lane and WaWa, this data shows a significant number of pedestrians in August 2023 walking along DE SR 26 (270 or more in a 14-hour period) as well as a significant number of bicycles traveling along DE SR 26 (nearly 200 in a 14-hour period). Several field visits to the study area during the summer months reveal that many of these pedestrians and bicyclists are families with young children.

The crash data for DE SR 26 for the period from July 22, 2017, through June 6, 2023, was provided in the previous section in Tables 7 and 8 (Page 25). As shown in those tables, there were 42 intersection related crashes and 76 non-intersection related crashes during this time period. Six of the intersection related crashes involved a pedestrian or a bicyclist.

A 5-foot sidewalk is provided along both sides of DE SR 26 for most of the distance from DE SR 1 to the Assawoman Canal. A 5-foot bike path is also provided along both sides with the exception of locations where a right turn lane exist. On the north side of DE SR 26, the sidewalk terminates at Kent Avenue, approximately 600 feet west of DE SR 1. Consideration ought to be given to combining the sidewalk and bike path to provide for a wider multi-use path separated from motor vehicular traffic.

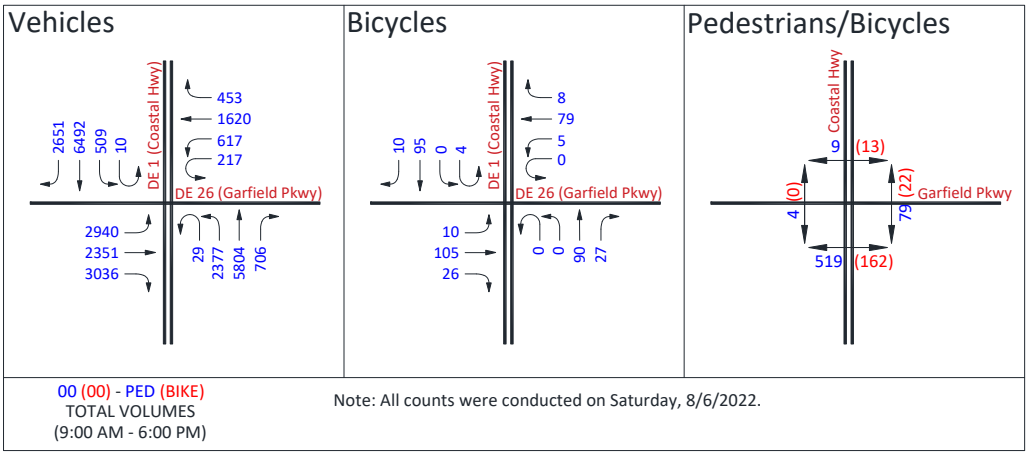
Alternate pathways from the residential areas on the west side of DE SR 1 to the Core Center of the Town of Bethany Beach should be explored. One potential pathway would be to connect Second Street and Central Blvd as shown in Figure 11. There is a Rectangular Rapid Flashing Beacon located at the intersection of Central Blvd and DE SR 1. However, we recognize that this multi-use pathway connecting Second Street to Central Blvd would need to adhere to applicable environmental regulations.

Figure 11. Traffic Signals, Crosswalks, and RRFB's at DE SR 1 and SR 26



Motor vehicular and non-motor vehicular counts were conducted on a Saturday in August 2022 at the intersection of DE SR 1 and DE SR 26, Garfield Parkway. As shown on Figure 12, most pedestrians and bicycles cross DE SR 1 on the south leg where a pedestrian signal is located. However, some do cross the north leg where there is no pedestrian signal. Furthermore, many pedestrians cross the east leg and based on field observations then cross the south leg. Based on the pedestrian and bicycle volumes at this intersection as well as the number of bicycles and pedestrians traveling along the north side of DE SR 26, it is recommended that a pedestrian signal be added to the north leg of DE SR 1 and DE SR 26 and that the sidewalk be continued from Kent Avenue to DE SR 1 along the north side of DE SR 26.

Figure 12. 9-Hour Traffic Volumes at Intersection of DE SR 1 and DE SR 26



APPENDIX A

Turning Movement Counts and Machine Counts

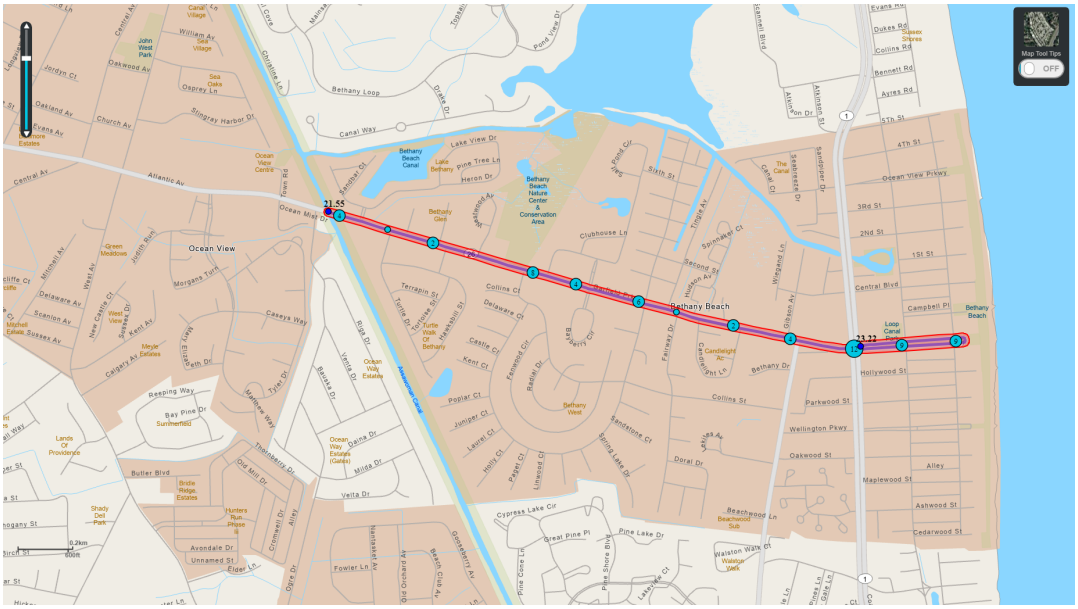
Crash Data

Delaware Crash Analysis Reporting System

Crash Study Time Period: 11/30/2020 - 11/30/2023
Query Type: AdvancedQueryTool
Description: Town of Bethany Beach Ped/Bike Study
Study Requested By: Ming-Yu Chien (TTG)
Study Generated By: TDTSCJM
Number of Crashes: 62
Includes Non-Reportable Crashes: N
Study Code:



Disclaimer for CARS: Crash data and associated police reports are intended for DelDOT use only and shall not be transmitted, copied, distributed or provided to any entity other than DelDOT unless written approval is received from the DelDOT Legal Section. Police reports are the property of the Delaware State Police.

State of Delaware Crash Study

Summary	
	# of Crashes
Total Crashes	62
Fatal Crashes	0
Total Alcohol-Related Crashes	4
Total Non Alcohol-Related Crashes	58
Total Fatalities	0
Total Pedestrian Fatalities	0
Total Pedestrian Injuries	2
Total Pedestrian Crashes	2
Total Motorcycle Crashes	2
Total Pedalcyclist Crashes	3

Classification		
	# of Crashes	**% of Total Crashes**
Non-Reportable	0	0.00%
Reportable	51	83.61%
Personal Injury	10	16.39%
Fatality	0	0.00%
Total	**61**	

Manner of Impact		
	# of Crashes	**% of Total Crashes**
Front to rear	29	46.77%
Front to front	3	4.84%
Angle	8	12.90%
Sideswipe, same direction	7	11.29%
Sideswipe, opposite direction	1	1.61%
Rear to side	3	4.84%
Rear to rear	1	1.61%
Other	2	3.23%
Unknown	0	0.00%
Not a collision between two vehicles	8	12.90%
Total	**62**	

Alcohol Related Crashes By Classification					
	Non-reportable	Reportable	Personal Injury	Fatality	**Total**
Alcohol Related	0	3	1	0	**4**
Non-Alcohol Related	0	48	9	0	**57**
Total	**0**	**51**	**10**	**0**	**61**

Manner of Impact By Classification					
	Non-Reportable	Reportable	Personal Injury	Fatality	**Total**

Report Legend

CTY – County

RD – Maintenance Road

MP – Milepoint

C-MP – Continuous Milepoint

Fat – Fatality

Inj – Injury

AL - Alcohol Involved

LC – Lighting Condition

WC – Weather Condition

SC – Surface Condition

FHE – First Harmful Event

PC – Primary Contributing Circumstance

Class – Report Classification

MOI – Manner of Impact

Disclaimer for CARS: Crash data and associated police reports are intended for DelDOT use only and shall not be transmitted, copied, distributed or provided to any entity other than DelDOT unless written approval is received from the DelDOT Legal Section.
